Contrast Echocardiography Harald Becher, Andreas Helfen, 2019-07-03 This book provides a comprehensive overview of the practical aspects of contrast echocardiography. It also covers all the material in the guidelines published by the American Society of Echocardiography (ASE) in 2018 and the recommendations set out by the European Association of Cardiovascular Imaging (EACVI) in 2017. Contrast echocardiography at present is only used in 5-10% of cases but this is expected to grow rapidly following the recommendations of the ASE and EACVI. The chapters cover the approved indications and provide practical advice on how to administer the contrast agents and how to optimize the recordings as well as how to deal with the pitfalls. The reader will find all the information on how to use contrast agents for assessment of shunts, LV volumes and function as well as myocardial diseases and masses. Detailed protocols are included for stress echocardiography and myocardial perfusion imaging. Other topics covered include the use of contrast agents for coronary sonography and transesophageal echocardiography. *Contrast Echocardiography Compendium for Clinical Practice* comprehensively covers all aspects of the clinical use of contrast echocardiography and has been written by two cardiologists who share their experience from their high volume echo laboratories. One of the authors has been a member of both the ASE guidelines and EACVI recommendation writing groups. It is therefore a critical text for echocardiographers and sonographers who perform echocardiography.

Patient-specific Hemodynamic Computations: Application to Personalized Diagnosis of Cardiovascular Pathologies Lucian Mihai Itu, Puneet Sharma, Constantin Suciu, 2017-05-31 Hemodynamic computations represent a state of the art approach for patient specific assessment of cardiovascular pathologies. The book presents the development of reduced order multiscale hemodynamic models for coronary artery disease, aortic coarctation and whole body circulation which can be applied in routine clinical settings for personalized diagnosis. Specific parameter estimation frameworks are introduced for calibrating the parameters of the models and high performance computing solutions are employed to reduce their execution time. The personalized computational models are validated against patient specific measurements. The book is written for scientists in the field of biomedical engineering focusing on the cardiovascular system as well as for research oriented physicians in cardiology and industrial players in the field of healthcare technologies.
