Balogun,2023-09-20 This book assesses the challenges within the Nigerian educational system and provides a concrete plan to revitalize the low performing system by strengthening high stakes testing at all levels In Nigeria many citizens believe that the solution to the country's low performance in education is to eliminate high stakes standardized testing High stakes testing refers to applying standardized student achievement tests as a primary mechanism to evaluate students teachers and their school's performance This book argues that the poor quality of education and low ranking of Nigeria's educational system is not related to the negative consequences of high stakes testing but rather is due to many intrinsic factors By conducting a comparative analysis of six high performing education systems worldwide the book offers a comparative summative evaluation of the educational system and offers recommendations This book will be of interest to policymakers and scholars in the fields of African education higher education quality and global studies African studies management and administration leadership and professional development studies Joseph Abiodun Balogun is former Dean and retired Distinguished University Professor at the College of Health Sciences Chicago State University USA Visiting Professor Program Consultant

Alfred E. Eckes, Jr., 2014-07-03 Diverted by the dramatic military and political events of July 1944 few Americans realized the significance of an international conference taking place at Bretton Woods a mountain resort in New Hampshire far from the battle zones There United Nations experts were completing plans for a world monetary and financial system that they hoped would create a prosperous efficient global economy and avert economic tensions that might lead to another world war Until the dollar crisis of 1971 decisions made at Bretton Woods provided the institutions and rules for international finance The conference ushered in an era of unprecedented expansion of world trade and prosperity Based on extensive research in previously unavailable sources *A Search for Solvency* relates intriguing and often complicated issues of economic analysis and diplomatic history It offers a succinct and comprehensive survey of international monetary development from the collapse of the pre World War I gold standard to the devaluation of the dollar in 1971 In effect it explains the origins of late twentieth century global inflation and currency problems The author details how the ghost of the Great Depression the failure of monetary reconstruction efforts after World War I and the memory of the nineteenth century gold standard guided efforts to construct the Bretton Woods system This preoccupation with the past as well as political constraints produced a monetary system protected against past dangers fluctuating currencies controls and deflation but dangerously vulnerable to inflationary pressures The weaknesses of Bretton Woods a system geared to an era in which economic power was concentrated in the United States became visible in the 1960s and painfully apparent by the mid 1970s ***Shaping the***

international relations **The Complexity of Human Rights** Philip Alston, 2024-02-08 This book provides the first systematic assessment from a human rights law perspective of the landmark contributions of the renowned legal anthropologist Sally Engle Merry What impact does over simplification have on human rights debates The understandable tendency to present them as a single universal and immutable concept ignores their complexity and by extension only serves to weaken them Merry and her colleagues transformed human rights thinking by highlighting the process of vernacularization which sees rights discourse as being unavoidably dependent upon translation and interpretation She also warned of the pitfalls of excessive reliance upon statistical and other indicators through the process of quantification Here the leading voices in the field assess the significance of these contributions **Greenhouse Gas Control Technologies** B. Eliasson, P. Riemer, A. Wokaun, 1999-05-20 These proceedings contain 270 papers outlining ideas and contributions to the new scientific technical and political discipline of Greenhouse Gas GHG Control The contributions were presented at the 4th International Conference on Greenhouse Gas Control Technologies GHGT 4 It was the largest gathering of experts active in this new and fast developing field GHGT 4 was different from its predecessors in that it included all greenhouse gases not only CO₂ and all issues which could contribute to the mitigation of the greenhouse problem technical economic and political The main focus was on practical solutions and real demonstrations of mitigation technology being planned and implemented today It also addressed ways to increase the efficiency of power production and utilisation and looked at proposals to encourage the development of renewable energy sources During the Opening Session 10 keynote addresses were heard from prominent personalities in government industry and academia To tackle this very inter disciplinary problem and to achieve acceptable solutions it is essential for industry and government to initiate intense dialogue and cooperation Conferences like this can provide the opportunity for a meeting of minds between engineers and politicians in the face of global challenge The primary attributes of this global challenge are manifold the problem is global and international it is inter disciplinary both in substance and approach it covers technical political and economic issues and involves government science industry and academia it is complex and non linear and it will take the efforts of all parties involved to solve the problem These proceedings contain ideas for starting demonstration projects and for making better use of the power and flexibility of market measures They also show it is a problem we can influence and that there is a wealth of ideas The challenge now is to find the right partners to put these ideas into action
