Levees and the National Flood Insurance Program National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Levees and the National Flood Insurance Program: Improving Policies and Practices, 2013-07-18 The Federal Emergency Management Agency's FEMA Federal Insurance and Mitigation Administration FIMA manages the National Flood Insurance Program NFIP which is a cornerstone in the U S strategy to assist communities to prepare for, mitigate against, and recover from flood disasters The NFIP was established by Congress with passage of the National Flood Insurance Act in 1968 to help reduce future flood damages through NFIP community floodplain regulation that would control development in flood hazard areas provide insurance for a premium to property owners and reduce federal expenditures for disaster assistance The flood insurance is available only to owners of insurable property located in communities that participate in the NFIP Currently the program has 5 555 915 million policies in 21 881 communities³ across the United States The NFIP defines the one percent annual chance flood 100 year or base flood floodplain as a Special Flood Hazard Area SFHA The SFHA is delineated on FEMA's Flood Insurance Rate Maps FIRM's using topographic meteorologic hydrologic and hydraulic information Property owners with a federally backed mortgage within the SFHAs are required to purchase and retain flood insurance called the mandatory flood insurance purchase requirement MPR

Levees and floodwalls hereafter referred to as levees have been part of flood management in the United States since the late 1700's because they are relatively easy to build and a reasonable infrastructure investment A levee is a man made structure usually an earthen embankment designed and constructed in accordance with sound engineering practices to contain, control, or divert the flow of water so as to provide protection from temporary flooding A levee system is a flood protection system which consists of a levee or levees and associated structures such as closure and drainage devices which are constructed and operated in accordance with sound engineering practices Recognizing the need for improving the NFIP's treatment of levees FEMA officials approached the National Research Council's NRC Water Science and Technology Board WSTB and requested this study The NRC responded by forming the ad hoc Committee on Levees and the National Flood Insurance Program Improving Policies and Practices charged to examine current FEMA treatment of levees within the NFIP and provide advice on how those levee related policies and activities could be improved The study addressed four broad areas: risk analysis, flood insurance, risk reduction, and risk communication regarding how levees are considered in the NFIP Specific issues within these areas include current risk analysis and mapping procedures behind

accredited and non accredited levees flood insurance pricing and the mandatory flood insurance purchase requirement mitigation options to reduce risk for communities with levees flood risk communication efforts and the concept of shared responsibility The principal conclusions and recommendations are highlighted in this report *Engineer Manual EM 1110-2-2902 Engineering and Design* United States Government Us Army,2021-04-22 This United States Army Corps of Engineers publication Engineer Manual EM 1110 2 2902 Engineering and Design Conduits Pipes and Culverts Associated with Dams and Levee Systems December 2020 provides risk informed guidance for the life cycle of conduits pipes and culverts associated with U S Army Corps of Engineers USACE constructed dam and levee projects This manual applies to all HQUSACE elements major subordinate commands districts laboratories and field operating activities having responsibilities for the design and construction of civil works projects **Design and Construction of Levees** ,2000 The purpose of this manual is to present basic principles used in the design and construction of earth levees This manual applies to all Corps of Engineers Divisions and Districts having responsibility for the design and construction of levees This manual is approved for public release distribution is unlimited This manual is intended as a guide for designing and constructing levees and not intended to replace the judgment of the design engineer on a particular project *Geotechnical Engineering of Dams, 2nd Edition* Robin Fell,Patrick MacGregor,David Stapledon,Graeme Bell,Mark Foster,2014-11-21 Geotechnical Engineering of Dams 2nd edition provides a comprehensive text on the geotechnical and geological aspects of the investigations for and the design and construction of new dams and the review and assessment of existing dams The main emphasis of this work is on embankment dams but much of the text particularly those parts related to geology can be used for concrete gravity and arch dams All phases of investigation design and construction are covered Detailed descriptions are given from the initial site assessment and site investigation program through to the preliminary and detailed design phases and ultimately the construction phase The assessment of existing dams including the analysis of risks posed by those dams is also discussed This wholly revised and significantly expanded 2nd edition includes a lengthy new appendix on the assessment of the likelihood of failure of dams by internal erosion and piping This valuable source on dam engineering incorporates the 200 years of collective experience of the authors in the subject area Design methods are presented in combination with their theoretical basis to enable the reader to develop a proper understanding of the possibilities and limitations of a method For its practical well founded approach this work can serve as a useful guide for professional dam engineers and engineering geologists and as a textbook for university students Flood Handbook Saeid Eslamian,Faezeh A.
