method for building real world problem solving systems such as medical diagnostic procedures and intelligent controllers for autonomous underwater vehicles AUVs and other robots The approach taken is different from other work reported in the artificial intelligence literature in several respects It defines schema based reasoning in which schemas explicitly declared packets of related knowledge are used to control not only the reasoner s planning but also all other facets of its behavior It is a kind of reactive reasoning that the author calls adaptive problem solving the reasoner maintains commitments to future goals but is able to change its focus of attention as the problem solving situation requires It is a context sensitive reasoning method Every decision it makes relies on the use of contextual knowledge to be appropriate for the current problem solving situation Furthermore context is represented explicitly by always keeping a current representation of the context in mind the reasoner s behavior is automatically sensitive to the context with very little work needed per decision Schema based reasoning a generalization of case based reasoning extends the usual idea of case based reasoning to encompass all aspects of the reasoner s behavior and it extends it to make use of generalized cases i e schemas rather than particular cases thus saving effort needed to transfer knowledge from an old case to a new situation Though the work originated in the domain of medical diagnostic problem solving treating diagnosis as a planning task it is even more appropriate for controlling autonomous systems The author is currently extending the approach by creating a robust controller for long range autonomous underwater vehicles that will be used to carry out ocean science missions *Fundamentals of Automotive*
