Varian Microeconomics 6th Edition:

Intermediate Microeconomics Hal R. Varian, 1996 **Access-right** Zohar Efroni, 2011 Copyright law has become the subject of general concerns that reach beyond the limited circles of specialists and prototypical rights holders The role scope and effect of copyright mechanisms involve genuinely complex questions Digitization trends and the legal changes that followed drew those complex matters to the center of an ongoing public debate In *Access Right The Future of Digital Copyright Law* Zohar Efroni explores theoretical normative and practical aspects of premising copyright on the principle of access to works The impetus to this approach has been the emergence of technology that many consider a threat to the intended operation and perhaps even to the very integrity of copyright protection in the digital setting It is the ability to control digital works already at the stage of accessing them by means of technological protection measures The pervasive shift toward the use of digital technology for the creation dissemination exploitation and consumption of copyrighted material warrants a shift also in the way we perceive the structure of copyright rules Premising the copyright order on the concept of digital access first calls for explaining the basic components of proprietary access control over information in the abstract The book then surveys recent developments in the positive law while showing how the theoretical access right construct could explain the logic behind them Finally the book critically analyzes existing approaches to curbing the resulting problems of imbalance and overprotection which are said to disadvantage users In conclusion the book advocates for a structural overhaul of our current regulative apparatus The proposed reform involves a series of changes in the way we define copyright entitlements and in the way in which those entitlements may interrelate within a single coherent scheme

Producing Prosperity

Randall Holcombe,2013-01-03 The substantial prosperity that characterizes market economies at the beginning of the twenty first century is relatively recent in human history Prior to the

Industrial Revolution economic progress was so slow that people would not have been able to recognize it in their lifetimes whereas today economic progress is so much a part of people's lives that they take it for granted. In this new volume Randall G. Holcombe argues that economic analysis as it developed through the twentieth century relies heavily on concepts of economic equilibrium and is not descriptive of the dynamic real world economy that is characterized by economic progress. Even in dynamic settings economic models focus on income growth leaving out the entrepreneurial forces that generate economic progress resulting in the introduction of new goods and services and new production processes. Economic analysis focuses on the forces that lead to an economic equilibrium not the forces that produce prosperity. This characterization of economic analysis describes a substantial component of economics as it has developed over the past century. However, there are also economists who have analyzed the factors that lead to an entrepreneurial and innovative economy generating progress rather than equilibrium. This volume does not question the value of past research but argues that looking ahead economics should build on its past to focus on factors that create an entrepreneurial and innovative economy that is characterized by progress and prosperity. This would make economic analysis more consistent with the remarkable progress and prosperity that characterizes the modern economy. This volume lays out a framework for economic analysis that consistently incorporates the real world factors that produce prosperity.

Information Logistics. Decentralized Approaches of Information Allocation in Information Exchange Networks Sven Grolik, 2012-02-24. The use of modern planning and optimization systems for process synchronization in value networks requires the optimal information exchange between the entities involved. The central focus of Sven Grolik's study is the development of efficient mechanisms for the coordination of information allocation by the example of interconnected transportation marketplaces. Unlike traditional information allocation algorithms, the algorithms developed in his analysis are based on update mechanisms which maintain a weak consistency of replicated information in the network. Sven Grolik shows that these algorithms enable savings concerning the update costs as well as increase the performance within the network but at the same time guarantee compliance with quality of service levels concerning the currency of information. The focus of this work is the development of decentralized online algorithms which make a logically distributed computation possible on the basis of local information. The development of these innovative algorithms is based on approaches of multi-agent system theory as well as distributed simulated annealing techniques.
