Focus On: 100 Most Popular Sedans Wikipedia contributors, **The Automotive Chassis: Engineering Principles** Jornsens Reimpell, Helmut Stoll, Jürgen Betzler, 2001-05-23 This comprehensive overview of chassis technology presents an up to date picture for vehicle construction and design engineers in education and industry The book acts as an introduction to the engineering design of the automobile s fundamental mechanical systems Clear text and first class diagrams are used to relate basic engineering principles to the particular requirements of the chassis In addition the 2nd edition of The Automotive Chassis has a new author team and has been completely updated to include new technology in total vehicle and suspension design including platform concept and four wheel drive technology **Autocar** ,2005 **Ward's Automotive International** ,1995 Automotive Industries ,2002 **From Specification to Embedded Systems Application** Achim Rettberg, Mauro C. Zanella, Franz J. Rammig, 2005-08-10 IFIP TC10 Working Conference International Embedded Systems Symposium IESS August 15 17 2005 Manaus Brazil **Racecar Engineering** ,2009 **Autocar & Motor** ,1993-07 Motor Industry Management ,2000-02 **Automotive Engineering International** ,2007 **Dual-use Fluids for Power Steering and Power Brakes** Bruce C. Brenner, Society of Automotive Engineers, 1972 **On Electrohydraulic Pressure Control for Power Steering Applications** Alessandro Dell'Amico, 2016-02-04 This thesis deals with the Electrohydraulic Power Steering system for road vehicles using electronic pressure control valves With an ever increasing demand for safer vehicles and fewer traffic accidents steering related active safety functions are becoming more common in modern vehicles Future road vehicles will also evolve towards autonomous vehicles with several safety environmental and financial benefits A key component in realising such solutions is active steering The power steering system was initially developed to ease the driver s workload by assisting in turning the wheels This is traditionally done through a passive open centre hydraulic system and heavy trucks must still rely on fluid power due to the heavy work forces Since the purpose of the original system is to control the assistive pressure one way would be to use proportional pressure control valves Since these are electronically controlled active steering is possible and with closed centre energy efficiency can be significantly improved on In this work such a system is analysed in detail with the purpose of investigating the possible use of the system for Boost curve control and position control for autonomous driving Commercially available valves are investigated since they provide an attractive solution A model based approach is adopted where simulation of the system is an important tool Another important tool is hardware in the loop simulation A test rig of an electrohydraulic power steering system is developed This work has shown how proportional pressure control valves can be used for Boost curve control and position control and what implications this has on a system level As it turns out the valves add a great deal of time lag and with the high gain from the Boost curve this creates a control challenge The problem can be handled by tuning the Boost gain pressure response and damping and has been effectively shown through simulation and experiments For position control there is greater freedom to

design the controller to fit the system The pressure response can be made fast enough for this case and the time lag is much less critical

Power Steering Failure Study. Volume I: Executive Summary. Final Report Richard H. Klein, 1978

An Objective Assessment of Steering System Parameters for Driver's Torque Feedback Alexander Hitti, 2016 The electric power steering system has drastically impacted the concept of steering feel In a Column Motor Driven Power Steering C MDPS system the assist motor is mounted directly to the steering column This assist motor applies a torque onto the steering column to provide a desired torque hence indirectly impacting the steering torque feedback or feel A bond graph model of this C MDPS system is developed and connected to a full vehicle bicycle car model The resulting state equations from this model are implemented into MatLab Simulink for simulation Higher order friction models are used in the worm gear the steering rack and the vehicle tires to increase fidelity The sensitivity of the system to key parameters and frictions is studied through varying these parametric elements by percentages of their nominal value and observing the effect on system outputs such as Yaw Rate Gain and Parking Effort The system performance is validated based on objective data A test stand setup is used to study the characteristics of the torque on the steering column and the worm gear friction The full vehicle model is compared to data from a test vehicle
