Analytical Chemistry Associated with the Destruction of Chemical Weapons M. Heyl, Raymond R. McGuire, 2012-12-06 One of the major problems associated with the disposal of chemical weapons is that the agents have degraded over time some quite seriously Detecting and identifying the products of this decomposition are necessary prerequisites to the safe complete and environmentally benign destruction of stockpiled weapons The book presents and discusses both basic and novel techniques in a variety of areas of analytical chemistry which are relevant to achieving the ultimate destruction of chemical weapons Presentations address sample collection and preparation mass spectrometry chromatographic techniques NMR and air monitoring techniques The work shows that analytical methods do exist to effectively support the destruction of chemical munitions While further research is needed the book provides an excellent baseline for further advances in the field

Actinobacteria, a Source of Biocatalytic Tools Dirk Tischler, Willem J. H. van Berkel, Marco W. Fraaije, 2019-08-12 Actinobacteria Actinomycetes represent one of the largest and most diverse phyla among Bacteria The remarkable diversity is displayed by various lifestyles distinct morphologies a wide spectrum of physiological and metabolic activities as well as genetics Interestingly most Actinobacteria have a high GC content ranging from 51% to 70% and belong to Gram positive or Gram variable type microbes Many species are well known for large genomes which may be of linear style as in case of rhodococci or circular Many of those harbor linear megaplasmids as a kind of genetic storage device Frequently gene redundancy is reported and in most cases the evolutionary history or a functional role remains enigmatic Nevertheless these large genomes and megaplasmids provide access to a number of potential homologous biocatalysts which await elucidation Actinobacteria are well known for their biotechnological potential which is exemplarily described for amino acid producing Corynebacteria secondary metabolite producing Streptomyces pathogenic targets as Nocardia and Mycobacteria carotenoid

building *Micrococcus* strains acid fermenting *Propionibacteria* health and food related *Bifidobacterium* strains rubber degrading *Gordonia* species and organic pollutant degrading rhodococci among others In many cases individual pathways or enzymes can be modified or recombinantly employed for biocatalysis Even some genetic tools to work directly in those microbes have been successfully used as for example in *Corynebacterium* or in *Rhodococcus* species During the last decade more and more genomes have been sequenced and made available for data mining and become accessible by state of the art genomic manipulation methods as minimal genomes knock out or artificial evolution With respect to this large and ancient phylum many questions can be asked either from a scientific or industrial point of view In order to provide some crystallization points we like to raise some examples as follows How small can be an actinobacterial genome What is the driving force to comprise large and repetitive genomes megaplasms What is needed to generate an actinobacterial power house for industry Can we annotate novel biocatalysts from scratch and improve functional annotation What are common and different features with respect to other bacteria and or fungi How many novel antibiotics are hidden among Actinobacteria Is there more potential among extremophile members or are they only specialized Here especially the production of natural compounds is of high interest

Perspectives in Flavor and Fragrance Research Philip Kraft, 2005-05-30 It happened in Manchester May 12 14 2004 For the fifth time since the early 1990 s the Royal Society of Chemistry and the Society of the Chemical Industry jointly held their flavours fragrances conference this time in the Manchester Conference Centre of the UMIST Manchester The meeting saw over one hundred participants from one dozen countries and was the largest of the series so far In two and a half days divided into five sessions twenty five speakers from academia and industry alike presented their recent research results related to this exciting field including Natural Products Foods and Flavors Perfumery and Olfaction and last but not least Fragrance Chemistry Research is more than ever central to the F F industry with its constant demand for innovation and its frequently changing trends Especially in the classic and well explored domains of musks and amber odorants fascinating new

discoveries were made only very recently which proves the endless possibilities in the search for new aroma chemicals This was also reflected in the logo of the conference which featured Ambrocenide as a new powerful ambery odorant that emerged from classical cedrene chemistry and it is as well reflected in four of the sixteen conference papers that are collected in this special issue of Chemistry Biodiversity With its focus on biorelevant chemicals Chemistry Biodiversity was predestined to publish the diverse highlight papers of the flavours fragrances conference Fragrance and fragrance materials by definition elicit a biological response serve as versatile signals trigger the sense of smell and taste in various ways and every odorant design is nothing more than chemistry probing nature But Fragrance Chemistry can also document and even preserve the biodiversity of scents as was the topic of the lecture of Roman Kaiser which had been published in advance as the first full paper of Chemistry Biodiversity

Methods for Real-Time Measurement of THMs and HAAs in Distribution Systems - Part 2, 2007 In this project researchers developed a practical low cost chemical analyzer for real time monitoring of trihalomethanes THMs and haloacetic acids HAAs in drinking water distribution systems THMs and HAAs are possibly harmful to humans if ingested For this reason the US Environmental Protection Agency established maximum contaminant levels Future regulations might lower the MCL of these substances Real time monitoring of THMs and HAAs will become necessary for future regulatory compliance
