

VASOACTIVE MEDICATIONS

Clinical Rationale for Use → to facilitate clinical recovery by increasing cardiac output and/or vascular tone

Inotropes

* need to correct any fluid deficits in pt first before use *

→ affects the force of myocardial contraction

- Dopamine
- Dobutamine
- Milrinone

Vasopressors

→ stimulates contraction of capillary, arterioles & veins → increase to blood flow thus ↑ BP

- Epinephrine
- Norepinephrine
- Phenylephrine
- Vasopressin

Dopamine

→ the way it "acts" depends on how fast it's run

- ↑ myocardial contractility → ↑ HR
- ↑ renal vascular vasodilation = ↑ blood flow to kidney

• ↑ peripheral perfusion if HF not too severe, fluid overload

Clinical uses: cardiogenic shock, vasodilation, shock, symptomatic bradycardia

Dobutamine

→ onset 1-2 min, peak 10 min, half-life 2 min

- * can use as inotropes
- * hypotension must be corrected
- ↑ myocardial contractility
- ↑ myocardial oxygen consumption
- promotes a "good squeeze" = ↑ cardiac output

Clinical uses: ↓ cardiac output, cardiogenic shock, sepsis

Milrinone

→ potent inotropes and vasodilator

- half-life 2 hours
- good option for pt's who don't respond to dopamine
- ↑ contractility, improves diastolic relaxation

Clinical uses: low cardiac output, heart failure (esp @ side HF)

Vasoactive Drugs Study Guide:

Critical Care Study Guide Gerard J. Criner, Gilbert E. D'Alonzo, 2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found. Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions. Because this knowledge base crosses many different disciplines, introduction to caring for the intensive care patient while exciting may also be intimidating. This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful. The book contains three components: 1. description of the procedural tasks commonly performed for the critically ill patient; 2. explanation of the most common pathophysiologic states encountered; and 3. description of specific disease entities with details of their differential diagnosis, diagnostic strategy, and therapeutic plan. This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks. Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy. As an additional study aid, margin notes highlight important teaching points and facilitate easy review of chapter content. To consolidate the principles outlined in each chapter, review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader.

Pediatric Advanced Life Support Study Guide Aehlert, 2017-01-16 Fully revised to meet the 2015 CPR ECC Guidelines and to prepare students and professionals for PALS certification and recertification. *Pediatric Advanced Life Support Study Guide* Fourth Edition provides a clear and complete approach to managing pediatric emergencies. Designed for use by the spectrum of healthcare professionals, the Fourth Edition provides users with the critical information needed to approach real-life pediatric emergencies. The Fourth Edition includes End of chapter quizzes with answers and objectives as well as a comprehensive posttest to gauge material comprehension. Case studies at the end of appropriate chapters for practice with real-world material application. Clear procedural explanations written in descriptive yet accessible language. A refined Table of Contents including standalone chapters on cardiac dysrhythmias for focused learning and study. PALS Pearl boxes for text-to-everyday clinical application. In-text references for deeper research if desired.

Pediatric Critical Care Study Guide Steven E. Lucking, Frank A. Maffei, Robert F. Tamburro, Neal J. Thomas, 2012-04-10 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher-level pediatric critical care practitioner.
