Quality and Regulation in Health Care Robert Dingwall, Paul Fenn, 2022-11-30 First published in 1992 Quality and Regulation in Health Care employs socio-legal ideas concerning regulation to examine the methods used to influence the quality of health care in the US UK and Western Europe Throughout the Western world health care systems both public and private are grappling with the problems of assuring quality while containing costs On the one hand governments and insurers argue that there must be some limit to the apparently endless growth of health care expenditures On the other patient groups and consumer advocates already dissatisfied by the problems in holding doctors accountable for their actions protest that such limits must not result in sick people getting inferior treatment This book examines in detail the debate surrounding the question How can the professional expertise of the clinicians be reconciled with the preferences of their patients and the economic concerns of taxpayers or insurers It will be essential reading for graduate and undergraduate courses in health policy medical sociology and health law

Understanding Quantum Phase Transitions Lincoln Carr, 2010-11-02 Quantum phase transitions QPTs offer wonderful examples of the radical macroscopic effects inherent in quantum physics phase changes between different forms of matter driven by quantum rather than thermal fluctuations typically at very low temperatures QPTs provide new insight into outstanding problems such as high temperature superconductivity

From Gravity to Thermal Gauge Theories: The AdS/CFT Correspondence Eleftherios

Papantonopoulos,2011-03-26 The AdS CFT correspondence is a powerful tool in studying strongly coupled phenomena in gauge field theories using results from a weakly coupled gravity background studied in the realm of string theory AdS CFT was first successfully applied to the study of phenomena such as the quark gluon plasma produced in heavy ions collisions Soon it was realized that its applicability can be extended in a more phenomenological approach to condensed matter systems and to systems described by fluid dynamics The set of tutorial reviews in this volume is intended as an introduction to and survey of the principle of the AdS CFT correspondence in its field string theoretic formulation its applicability to holographic QCD and to heavy ions collisions and to give a first account of processes in fluid dynamics and condensed matter physics which can be studied with the use of this principle Written by leading researchers in the field and cast into the form of a high level but approachable multi author textbook this volume will be of benefit to all postgraduate students and newcomers from neighboring disciplines wishing to find a comprehensive guide for their future research **Nitrides with**

Nonpolar Surfaces Tanya Paskova,2008-09-08 This is the first monograph to discuss in detail the current stage of development of nonpolar nitrides with specific emphasis on the three main topics of crystal growth properties and device studies World class researchers summarize their own recent achievements in their respective fields of expertise covering both nonpolar and semipolar nitride materials The bulk of the discussion in each chapter is related to the physical properties of the material obtained by the respective technique in particular defect density and properties of the defects in nonpolar nitrides In addiiton the optical and vibrational properties are also addressed in several chapters as is progress in heterostructures quantum wells and dots based on the AlGa_N Ga_N and the InGa_N Ga_N systems Finally an outlook of the application areas of the differently grown materials is presented in most chapters together with the capabilities and limitations of the respective growth approaches used **50 Years Of The Renormalization Group: Dedicated To The**

Memory Of Michael E Fisher Amnon Aharony,Ora Entin-wohlman,David A Huse,Leo Radzihovsky,2024-07-26 The contributions in the book are devoted to the memory of Michael E Fisher and hence include many personal memories from people whose work was influenced by him Also the book is a collection of articles from leaders in the field of phase transitions and critical phenomena to celebrate 50 years of the renormalization group and the 1972 paper by Wilson and Fisher Many of the articles review in tutorial form the progress in the fields of phase transitions and the renormalization group **Patents for Inventions** Great Britain. Patent Office,1922 **Periodic, Quasi-Periodic and Chaotic Motions**

in Celestial Mechanics: Theory and Applications Alessandra Celletti,Sylvio Ferraz-Mello,2007-02-02 The book provides the most recent advances of Celestial Mechanics as provided by high level scientists working in this field It covers theoretical investigations as well as applications to concrete problems Outstanding review papers are included in the book and they introduce the reader to leading subjects like the variational approaches to find periodic orbits and the space debris polluting the circumterrestrial space **Quantum Phases of Matter** Subir Sachdev,2023-04-13 This modern text describes the

remarkable developments in quantum condensed matter physics following the experimental discoveries of quantum Hall effects and high temperature superconductivity in the 1980s After a review of the phases of matter amenable to an independent particle description entangled phases of matter are described in an accessible and unified manner The concepts of fractionalization and emergent gauge fields are introduced using the simplest resonating valence bond insulator with an energy gap the Z₂ spin liquid Concepts in band topology and the parton method are then combined to obtain a large variety of experimentally relevant gapped states Correlated metallic states are described beginning with a discussion of the Kondo effect on magnetic impurities in metals Metals without quasiparticle excitations are introduced using the Sachdev Ye Kitaev model followed by a discussion of critical Fermi surfaces and strange metals Numerous end of chapter problems expand readers comprehension and reinforce key concepts

Quantum Phase Transitions Subir Sachdev, 2011-04-07 Describing the physical properties of quantum materials near critical points with long range many body quantum entanglement this book introduces readers to the basic theory of quantum phases their phase transitions and their observable properties This second edition begins with a new section suitable for an introductory course on quantum phase transitions assuming no prior knowledge of quantum field theory It also contains several new chapters to cover important recent advances such as the Fermi gas near unitarity Dirac fermions Fermi liquids and their phase transitions quantum magnetism and solvable models obtained from string theory After introducing the basic theory it moves on to a detailed description of the canonical quantum critical phase diagram at non zero temperatures Finally a variety of more complex models are explored This book is ideal for graduate students and researchers in condensed matter physics and particle and string theory

Simulation and Experiment in Laser Metrology Zoltan Füzessy, Werner Jüotner, Wolfgang Osten, 1996 These proceedings document about 45 contributions to the International Symposium on Laser Applications in Precision Measurement held in Balatonf red Hungary during June 3 6 1996 Special emphasis was given to the Combination of Simulation and Experiment in Laser Metrology International experts provide a survey over a large variety of their latest achievements and developments in this rapidly advancing field Over the last years optical measurement techniques like structured illumination holographic interferometry and tomography were applied more and more in combination with CAE tools such as CAD and FEM This combination has found a world of new applications in scientific and industrial branches interested in highly exact but nondestructive and noncontact measurement of technical components Each of the four sections contains an overview article given by international leading experts With that the proceedings should be considered to be a state of the art report combining the areas of mathematical modeling of objects experimental testing under definite stresses computer aided evaluation and measuring of objects

Interplay of Quantum and Statistical Fluctuations in Critical Quantum Matter Harley Scammell, 2018-08-28 This book explores critical phenomena in highly correlated quantum matter Specifically quantum antiferromagnets magnon Bose condensates and systems exhibiting deconfined quantum criticality are considered

The book's main achievement is the incorporation of both quantum and statistical fluctuations into a quantum field theoretic treatment of critical phenomena. This yields significant new insights into an abundance of problems, positions them in a much more general context, and offers an unprecedented power to analyze experimental and numerical data and predict new effects. Further, a major result and overarching theme is the exploration of the scale-dependent coupling constant, an effect known in quantum chromodynamics as asymptotic freedom. The book provides the first analysis to reveal asymptotic freedom in the quantum magnetism context and discusses many other manifestations. Another significant result concerns the development of a consistent theoretical framework that resolves a long-standing inconsistency in the theory of Bose condensation. Using the approach developed here, two new universality classes are subsequently identified. A final major result addresses the exotic scenario of deconfined quantum criticality. Within this framework, the book predicts the Bose condensation of particles with half-integer spin, the first ever made in this regard. In closing, a smoking gun criterion to test for this exotic condensate is established.

Principles and Practice of Constraint Programming - CP 2012 Michela Milano, 2012-10-03. This book constitutes the thoroughly refereed post-conference proceedings of the 18th International Conference on Principles and Practice of Constraint Programming, CP 2012, held in Québec, Canada, in October 2012. The 68 revised full papers were carefully selected from 186 submissions. Beside the technical program, the conference featured two special tracks. The former was the traditional application track, which focused on industrial and academic uses of constraint technology and its comparison and integration with other optimization techniques: MIP, local search, SAT, etc. The second track featured, for the first time in 2012, concentrated on multidisciplinary papers, cross-cutting methodology and challenging applications, collecting papers that link CP technology with other techniques like machine learning, data mining, game theory, simulation, knowledge compilation, visualization, control theory, and robotics. In addition, the track focused on challenging application fields with a high social impact, such as CP for life sciences, sustainability, energy efficiency, web, social sciences, finance, and verification.
