Note 1: When designing a ventilation system, care must be taken to balance the static pressure with the input airflow to avoid collapsing the containment or shut-work due to a high negative pressure.

Note 2: The table occasionally identifies two options for a given component. For example, containment materials (5.3.1) are shown as being either rigid or flexible. If the specifier requires the use of rigid materials only, this restriction must be specified separately.

Note 3: Class 4W will capture dust/drips and chips and debris, but will not contain the water used for cleaning. When vacuum shrouded blasting is employed, ground covers or the hanging tarpaulins may provide controls equivalent to Class 1W.
