A common example of negative image design is the thermometer. Thermometers are similar to reaction time test stimuli. They have positive integers along one axis and negative integers along the other. Commonly, people recognize a temperature of 0°C. People use the number system to measure and represent temperature. For example, if it is 0°C outside, and the temperature is 20°C inside, the temperature difference is 20°C. If the picture of the thermometer is used to represent the temperature, the scale is reversed. The 0°C mark is at the bottom, and the 20°C mark is at the top. This is a common example of negative image design.
