Progress in Catheter Ablation Liong Bing Liem, Eugene Downar, 2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy rate in curing supraventricular tachycardia involving an

accessory pathway or dual atrioventricular nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory. However, conventional RF ablation has several well known limitations, most notably its ability to only produce relatively small point lesions, rendering it effective only for an arrhythmia with a small and/or a superficial target. It was soon recognized that the technology would not likely have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia. Indeed, the application of conventional RF technology in these complex but common arrhythmias has yielded unsatisfactory results. **Abstracts**, 1954 100 technical questions and answers for job interview Offshore Oil & Gas Rigs Petrogav International Oil & Gas Training Center, 2020-06-30. Dimension in Hydraulic Machinery Testing with the Quartz Crystal Thermometer Alexander Louis London, D. V.

Nelson, 1969 The development of the quartz crystal thermometer with high sensitivity and good stability has added a new dimension to the test evaluation of hydraulic machinery performance Hydraulic losses appear as a heating effect in the fluid and these small temperature increases can be detected with uncertainties of the order of 1 ft of head loss The report presents the theory used in the hydrothermal method of testing and demonstrates its application in a particular pump test The techniques used to properly average fluid temperature at a flow cross section are described The values of pump efficiency established by the conventional hydromechanical tests and those established by the hydrothermal measurements for eight tests had an average difference of 0.8 percentage points This difference is well within experimental uncertainty
