**Installing Output Devices**

The VISTA-50P/VISTA-50PUL support up to 16 outputs. Each device must be programmed as to how to act (ACTION), when to activate (START), and when to deactivate (STOP). The 4204, and/or X-10 devices may be used as output devices.

**Installing the 4204 Relay Modules**

Each 4204 module provides 4 relays with Form C (normally open and normally closed) contacts.

The relay module will not operate until the device address you have set the DIP switches for is enabled in the control's *Device Programming* in the #93 Menu Mode.

To install the relay modules, see *Figure 3-17* and perform the following steps:

| Step       | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |            |                |     |          |     |          |     |          |     |          |
