

INSTALLATION MANUAL FOR MODELS NT-12S • NT-16S • NT26S

This design of these furnaces has been certified for installation in recreational vehicles only. In order for these furnaces to operate in conformity with generally accepted safety regulations, the installation instructions outlined in this book must be followed. Failure to comply with the installation instructions will void any responsibility of Suburban Manufacturing Company. Your furnace was inspected before it left the factory. If any damage has occurred or has been damaged do not install the furnace. Any damages should be reported to the transportation company immediately and the appropriate claims filed.

WARNING! Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury or loss of life. Refer to the installation instructions and/or owners manual provided with this appliance. Installation and service must be performed by a qualified installer, service agency or the gas supplier.

INSTALLATION INSTRUCTIONS

WARNING: Installation of this appliance must be made in accordance with the written instructions provided in this manual. No agent, representative or employee of Suburban or other persons have the authority to change, modify or waive any provision of the instructions contained in this manual.

CAUTION: If possible, do not install the furnace in where the vent can be covered or obstructed when the door is open. If this is not possible, then the level of the door must be maintained in order to provide a 6" minimum clearance between the furnace vent and any door whenever the door is open.

NOTE: The exhaust temperature of this furnace could cause or melt some materials. You should verify that the material used on the nearby door, panel, or cover will not become damaged from the exhaust temperature whenever the door, panel, or cover is in the open position.

CAUTION: Due to the difference in vent sizing, this appliance should not be installed in vent with a diameter that is smaller than the diameter of the vent or routing the vent away from the area around the appliance vent.

CAUTION: In any installation in which the vent of this appliance can be covered due to the construction of the RV or some other feature of the RV such as slide door, pop-top, etc., always leave the the appliance vented by opening it by setting the thermostat to the position "OFF" position and shutting off all electrical and gas supply to the appliance. Never operate furnace with vent covered.

These furnaces (factory installed and vented as described in this manual) meet the requirements provided by the air conditioning industry and are not subject to the construction or listing or venting of any other appliance. It is imperative that the products of combustion be properly vented to the atmosphere and that all combustion air supplied to burner be drawn from the outside atmosphere. (See "venting Vent Assembly")

IMPORTANT: If this furnace is to be connected to a carbon-dioxide sensing monitoring a reading unit, a manual or automatic shutoff is required to prevent any gas accumulation or from which the furnace. (Consult your gas supplier for the furnace construction (burner) and the operation of the carbon-dioxide sensing unit in the formation of combustion inside the furnace combustion chamber. This combustion may promote corrosion and premature failure of the combustion chamber.

NOTE: These furnaces shall be installed so the electrical components are protected from water.

These furnaces will accommodate an installation depth from 20 3/8" minimum (with standard vent tubes), to 50 1/2" maximum (with optional intake extension tubes) (See Figure 1.)

Readers are urged to read the installation instructions to insure proper installation and safe operation. We want an adequate clearance for combustion.

These furnaces are certified for use with propane/LP gas only. Gas supply pressure for propane or liquid adjustment.

Gas	Minimum	Maximum
Propane/LP	11" W.C.	13" W.C.

Return air

Return air must be from the living area of the coach.

NOTE: Any a must have a way of extraction to a large area (The flow to maintain about 100 cubic feet per minute) to avoid any return air opening from the area.

An opening must be provided in the interior ceiling of the coach directly in front of the furnace. The opening must allow the free, unobstructed return of the furnace. This opening may be used as a means of providing circulating return air

to the furnace. Other openings may be used as well. The minimum return air to the furnace must meet the requirements of the code. It is important that sufficient return air be provided to insure normal heating and operation of the furnace. Also, adequate clearances must be maintained around the furnace installation that the unit will be accessible for servicing. Failure to provide sufficient return air as well as an adequate opening for furnace removal voids the warranty.

In the U.S.A., the installation must comply with the following codes, in the absence of local building codes, refer to the listed edition of:

- 1. American Fuel Gas Code (ANSI Z223.1)
- 2. International Mechanical Code (ANSI Z223.1)

The furnace listing specifically provided in accordance with the latest edition of the National Electrical Code (NEC), N.E.C. The installation of the furnace shall be in accordance with the applicable local codes and regulations.

In Canada, the furnace must be installed in accordance with:

- 1. Canadian Code (CSA C22.2-0, 2-88) Electrical Requirements for Recreational Vehicles
- 2. Canadian Code (CSA C22.2-0, 2-88) Installation Requirements for Propane Appliances and Equipment in Recreational Vehicles
- 3. Canadian Code (CSA C22.2-0, 2-88) Installation Codes
- 4. Any applicable local codes and regulations.

TO INSTALL THE FURNACE

1. Locate the furnace near longitudinal center of the coach. Do not install the furnace with the vent facing toward the forward end of the coach.

2. Select a location for installation out of the way of wires, pipes, etc. that might interfere with combustion. Add-on to the following minimum clearances from the furnace cabinet for combustion combustion:

NT-12 • NT-16		NT-26S	
Front 3/8"	Side 0"	Front 1"	Side 0"
Back 0"	Top 1"	Back 0"	Top 1"

NOTE: Side and top clearances may be 0" for through the wall installations up to a maximum of 2 1/2" wall thickness (See Figure 1.)

3. When an appliance is installed directly on carpeting, tile or other combustible material, the appliance must be installed on a non-combustible material. The height and depth of the appliance, if preferred, the carpeting, tile or combustible material, other than wood may be used as long as the height and depth of the appliance plus the appliance minimum clearances to combustibles.

4. Determine "C" dimension as shown in Figure 1 or 2 depending on model.

5. Determine "Y" dimension as shown in Figure 1 or 2.

6. If "Y" is less than 22 3/8" for Models NT-12 or NT-16, or 22 3/8" for Model NT-26, then an opening 12 3/8" x 22 3/8" must be cut through the floor and only 12 3/8" x 22 3/8" opening is required. (See Figure 1.) Next, locate the center line of the furnace and make a hole. Cut a 22 3/8" x 12 3/8" diameter hole through floor into the return air space (See Figure 1.)

NOTE: Whenever the furnace cabinet is installed through the outside wall, the return air opening in the furnace cabinet must not be blocked. The minimum projection of the furnace cabinet into the wall is 2 1/2". (See Figure 1.)

NOTE: Furnace cabinet provided for "C" dimension to combustibles in excess of 2 1/2" of furnace cabinet.

7. If "Y" is 22 3/8" or greater for Model NT-12 or NT-16, or 22 3/8" or greater for Model NT-26, then a hole may be used to install the furnace. They are:

- a. Cut a 22 3/8" x 12 3/8" opening through combustibles as shown in Figure 1. Do not cut through trailer skin. Next, locate the center line of the furnace and make a hole. Cut a 22 3/8" x 12 3/8" diameter hole through floor into the return air space (See Figure 1.)

b. If you do not wish to cut the 22 3/8" x 12 3/8" opening, locate the center line of the
