

Sumpner's back to back test on single phase transformers

Aim: To perform Sumpner's back to back test for single phase transformers

Apparatus:

1. Two Single phase auto transformers, 230 V, 50 Hz
2. Ammeter (0 - 1 A)
3. Ammeter (0 - 5 A)
4. Voltmeter (0 - 150 V)
5. Voltmeter (0 - 50/75/100/150 V)
6. Wattmeter (150 V-5 A)
7. Wattmeter (75 V - 5 A)

Theory:-

This test is conducted simultaneously on two similar transformers to measure the transformers' temperature rise, efficiency and voltage regulation. This test is efficient since the power required to conduct this test is equal to the total losses of both the transformers. It might be noted that, to carry out this test, the two transformers need to be identical.

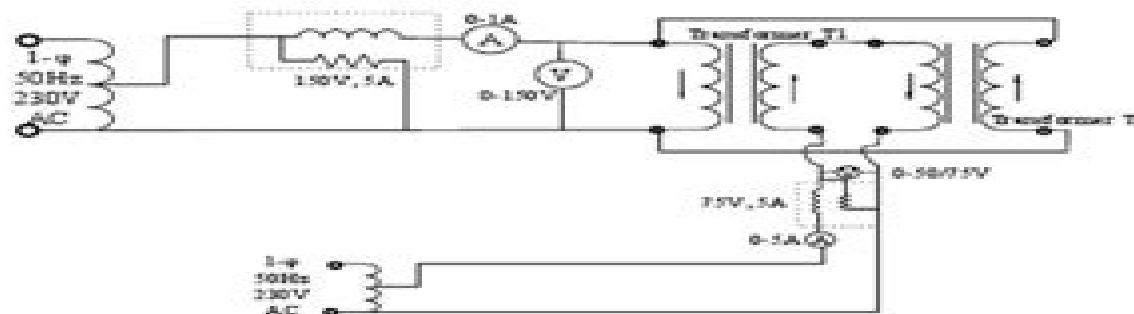

Fig. A. Circuit diagram of Sumpner's back to back test.

The connection diagram of back to back test on two similar transformers named T1 and T2 is shown in fig. A. The two low voltage primaries are connected in parallel across a rated single phase supply of 150 volts. The high voltage secondary windings are connected in phase opposition so that at rated voltage input the net output voltage is zero. In this condition both the transformers draw only the no-load current from the supply and net power input is equal to the core losses in the both the transformers. After this, voltage is injected
