Blue by Fire: A Marker of the Technical History of Glass and Ceramics Howell G. M. Edwards, Philippe Colomban, 2025-01-27 The use of natural mineral and synthetic blue pigments in antiquity for wall paintings and illuminated manuscript historiography evolved into the most suitable blue pigments for the decoration of glazed and enamelled wares ceramics glass and metal which required a stability at the high temperatures of the kilns used for glazing and firing Historic literature is often vague regarding the blue pigments used for this purpose The generic term cobalt blue covers a wide range of pigments that were actually used for the decoration of faience majolica stonewares earthenwares and porcelains This book addresses the application of elemental and molecular spectroscopic analytical techniques to a range of diverse problems which arise for decorated ceramics glass and enamels and related artefacts a history of techniques provenance and authentication The text contains an introduction to the important analytical techniques that are used in destructive and nondestructive analytical measurements and highlights potential future applications based upon novel miniaturised instrumentation for in situ studies The book is co authored by two international experts with many years experience in the application of analysis to artworks and archaeological artefacts and in the investigation of materials and sites for cultural heritage preservation Among 19 chapters one is devoted to an evaluation of the analytical techniques that are used and the pitfalls which can arise in the interpretation of the data The approach conveys the detailed information which has become available from the adoption of analytical techniques to diverse problems through the scientific interrogation of ceramic and related artefacts Examples are given of how the pigment analysis and sourcing can provide unique information about ancient trade routes and pigment sourcing historically A classic instance is provided by the transfer of European enamelling technologies carried out at the beginning of the 17th century in Japan Arita and at the turn of the 17th 18th centuries in China by the Jesuits established at the Court of respectively the Kyushu island of Dejima and the Chinese Qing Emperors Kangxi It has hence been demonstrated that some of the most beautiful porcelains emanating from Japan and China in this period incorporate blue decoration with pigments supplied from Europe The interpretation of the analytical data can assist

museum curators archaeologists art dealers experts and cultural heritage historians in the preservation and conservation of ancient materials which have applied blue pigment decoration **NUREG/CR.** U.S. Nuclear Regulatory Commission,1979

Land Use, Land Cover and Soil Sciences - Volume VI Willy H. Verheye,2009-09-19 This Encyclopedia of Land Use Land Cover and Soil Sciences is a component of the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Land is one of our most precious assets It represents space provides food and shelter stores and filters water and it is a base for urban and industrial development road construction leisure and many other social activities Land is however not unlimited in extent and even when it is physically available its use is not necessarily free either because of natural limitations too cold too steep too wet or too dry etc or because of constraints of access or land tenure This 7 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It carries state of the art knowledge in the fields of Land Use Land Cover and Soil Sciences and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs **Towards Safer Cardiac Surgery** D.B. Longmore,2012-12-06 D B LONGMORE The concept of the meeting on which this book is based is unique There has never before been a multi disciplinary meeting based entirely on the concept of making a major branch of surgery safer Hopefully this meeting will be archetypal and will set a precedent for similar attempts in other disciplines as well as future efforts to make cardiac surgery safer Cardiac surgery is still a rapidly growing discipline even after a quarter of a century of experience Like any new area of science or medicine initially there is an exponential growth of work publications meetings options of available equipment and all the ancillary and peripheral disciplines associated with it The ideas of the handful of original surgical pioneers some of whom have contributed to this book formed the basis of a still rapidly growing young branch of surgery with a whole new medical discipline of total extracorporeal circulation involving biochemical and haemodynamic control of a patient Scattering of Thermal Neutrons Andre Larose,2012-12-06 Solid state physicists have long appreciated the usefulness of thermal neutron scattering in the investigation of condensed matter This technique was first made possible by the advent of the nuclear reactor and has since then undergone many refinements The developments in this field of research have we felt necessitated the making of a comprehensive compilation of the published thermal neutron papers The large number of titles collected in this book as well as their diversity and their yearly distribution reflects the continued contribution of the neutron probe to our understanding of physical systems This bibliography is an updated and improved version of the one first published by us in March of 1973 under a similar title Many of the omissions and inconsistencies of the first edition such as occurred for example in the initialing of authors names have been corrected The literature search has been carried back to 1932 the year when the existence of the neutron was experimentally confirmed Several additional journals have also been searched and brought up

to date together with those listed in our first publication The number of entries is now 8543 an increase of 65 per cent relative to the first edition

Of all Britain s great archaeological monuments the Iron Age hillforts have arguably had the most profound impact on the landscape if only because there are so many yet we know very little about them Were they recognised as being something special by those who created them or is the hillfort purely an archaeologists construct How were they constructed who lived in them and to what uses were they put This book which is richly illustrated with photography of sites throughout England and Wales addresses these and many other questions After discussing the difficult issue of definition and the great excavations on which our knowledge is based Ian Brown investigates in turn hillforts origins their architecture and the role they played in Iron Age society He also discusses the latest theories about their location social significance and chronology The book provides a valuable synthesis of the rich vein of research carried out in Britain on hillforts over the last thirty years Hillforts great variability poses many problems and this book should help guide both the specialist and non specialist alike though the complex literature Furthermore it has an important conservation objective Land use in the modern era has not been kind to these monuments with a significant number either disfigured or lost Public consciousness of their importance needs raising if their management is to be improved and their future assured Continuatio Joannis Sleidani de statu religionis et reipublicae.
