situations of double exposure Drawing upon prominent recent and current climate related events Hurricane Katrina in New Orleans recurring droughts in India and the melting of Arctic sea ice the case studies each demonstrate a different pathway of interaction between globalization and global environmental change Through exploration of these pathways of double exposure the book also shows how broader human security concerns including growing inequalities growing vulnerabilities and unsustainable rates of development are integrally connected to both processes of global change The double exposure framework not only sheds light on the challenges raised by these two global processes but also reveals possibilities for using the interactions to generate positive opportunities for action
