powered adaptive learning platforms utilize algorithms that continually assess a student's progress and adjust the learning material accordingly. The name given to these kinds of systems is adaptive learning platforms. These platforms either identify the specific areas in which students need further practice or present them with additional resources to assist them with their study. Because it caters to the specific requirements of each individual student, adaptive learning is able to maximize the educational advantages that it offers to their fullest potential.

Intelligent Virtual Assistants, Chatbots, and other types of virtual assistants that are driven by artificial intelligence (AI) are available to provide students with rapid help. They are able to provide students with answers, explanations, and support as well as send them in the direction of resources that are relevant to the situation. Intelligent virtual assistants make it easier to obtain more information and also promote individual study.

1. Page Automated marking and commenting systems: Artificial intelligence has the ability to automate the grading process for objective tests such as multiple choice questions. This would free up the time of educators so that they could focus on more involved tasks.

Techniques such as Natural Language Processing (NLP) make it feasible for artificial intelligence to evaluate subjective forms of assessment such as essays and provide students detailed feedback. The employment of artificial intelligence (AI) technology which may assist educators in producing content of a higher level may be of assistance in the production of intelligent content. They are able to generate interactive materials, develop tests, and pick resources in a manner that is congruent with certain educational objectives.

Tools for producing content that are powered by artificial intelligence boost efficiency and help teachers generate interesting instructional materials.

Analytics: Predictive Artificial intelligence is able to spot patterns and produce forecasts by analyzing huge volumes of data which allows it to generate predictions about the performance of pupils as well as their behavior and the repercussions of their activities. Educators have the ability to make use of these insights in order to intervene early and provide timely assistance to students who are having difficulty so improving both retention rates and academic attainment.

The terms Virtual Reality (VR) and Augmented Reality (AR) refer to the following: Virtual reality (VR) and augmented reality (AR) may deliver learning experiences that are both immersive and engaging if they are combined with AI technology. Students have the chance to expand both their theoretical understanding and their ability to put that understanding into practice in a range of domains by exploring virtual environments, carrying out experiments, and taking part in simulations.

Making decisions based on the data provided: Artificial intelligence assists many stakeholders in the education system in making decisions based on data. The analytics made available by AI could be of use to administrators at educational institutions in recognizing trends, enhancing resource allocation, and improving operational efficiency.

Dashboards that are powered by AI provide real time information on the progress that students are making, allowing instructors to adjust their instructional strategies in accordance with the needs of their pupils.

Valuing Deaf Worlds in Urban India Michele Ilana Friedner, 2015-06-09 Although it is commonly believed that deafness and disability limits a person in a variety of ways Valuing Deaf Worlds in Urban India describes the two as a source of value in postcolonial India Michele Friedner argues that the experiences of deaf people offer an important portrayal of contemporary self making and sociality under new regimes of labor and economy in India Friedner contends that deafness actually becomes a source of value for deaf Indians as they interact with nongovernmental organizations with employers in the global information technology sector and with the state In contrast to previous political economic moments deaf Indians increasingly depend less on the state for education and employment and instead turn to novel and sometimes surprising spaces such as NGOs multinational corporations multilevel marketing businesses and churches that attract deaf congregants They also gravitate towards each other Their social practices may be invisible to outsiders because neither the state nor their families have recognized Indian Sign Language as legitimate but deaf Indians collectively learn sign language which they use among themselves and they also learn the importance of working within the structures of their communities to maximize their opportunities Valuing Deaf Worlds in Urban India analyzes how diverse deaf people become oriented toward each other and disoriented from their families and other kinship networks More broadly this book explores how deafness deaf sociality and sign language relate to contemporary society
