## Remote module options, order separately:

Red alarm LED (2098-9808)

**Note:** The capacity for smoke detection in air ducts does not replace smoke detection requirements for open areas or other non-duct applications.

## Introduction

The 4098-5214 duct smoke sensor housing enables a 4098-5252 MX Technology smoke sensor to monitor for smoke conditions in air conditioning or ventilating ducts. A sampling tube, selected in accordance with duct width, is installed into the duct, allowing air to be directed to the smoke sensor mounted in the housing and is discharged back into the duct by using the exhaust tube.

## Sensor description

### Rugged sensor construction

The MX 4098-5252 850 series photoelectric sensor provides a robust and reliable construction which has undergone stringent environmental testing. Electrical contacts are molded into the plastic to eliminate movement. The construction uses durable, fire resistant FR110 plastic. MX Sensors communicate to the MX Loop Module using MX Technology communications.

## Application information reference

Refer to the NFPA 90A standard for the Installation of Air Conditioning and Ventilating Systems; NFPA 72, the National Fire Alarm and Signaling Code; the NEMA Guide for Proper Use of Smoke Detectors in Duct Applications, and Installation Instructions 579-962.

## Soft addressing

Use the 850EMT programming tool to address MX technology sensors and addressable devices. Its simple menu driven user interface can automatically increment addresses after each write operation. This simple to use soft addressing technique avoids misaddressing errors that often occur when coded switches are used.

The 850EMT address programmer can also change addresses stored in a sensor or other addressable device's non-volatile memory, which makes addressing errors easy to rectify.

## Sensor details

The 4098-5252 Photoelectric Sensor incorporates a unique optical chamber design with a high signal-to-noise ratio that provides resilience to dust, dirt, small insects, and reduced service cost.

- The sensor communicates analog sensor information to the host control panel and is analyzed using the MX Fastlogic algorithm.
- The MX Fastlogic algorithm is considered an expert algorithm that uses real fire data as a basis for the alarm decision.

Figure 2: 4098-5252 Photoelectric Sensor

## MX Fastlogic sensor operation

MX Fastlogic sensor operation is an algorithm that takes into account the pattern of smoke buildup over time and applies fuzzy logic to calculate the level of risk. This algorithm uses over 200 years of fire test data from research at the University of Duisburg, Germany to determine the likelihood that there is a real fire, and is designed to achieve faster detection of real fires and slower, preferably no detection, of false alarm sources.

## MX Fastlogic sensor basics

The MX Fastlogic algorithm can be described as an expert algorithm that uses real fire data as a basis for the alarm decision. For any application, the most suitable detection, for response to an actual fire, is used to minimize false alarms. This general requirement is clearly reflected in local and national standards governing fire detection system designs.
