

BLUE ECONOMY

The Blue Economy is sustainable use of ocean resources for economic growth, improved livelihoods and jobs, and ocean ecosystem health.

The Blue Economy encompasses many activities...

RENEWABLE ENERGY

Sustainable marine energy can play a vital role in social and economic development.

FISHERIES

Marine fisheries contribute more than **US\$210 billion** annually to global GDP. More sustainable fisheries can generate more revenue, more fish and help restore fish stocks.

MARITIME TRANSPORT

Over **80% of international goods** traded are transported by sea, and the volume of seaborne trade is expected to double by 2030 and quadruple by 2050.

TOURISM

Ocean and coastal tourism can bring jobs and economic growth. Coastal Least Developed Countries and Small Island Developing States receive more than **45 million** visitors per year.

CLIMATE CHANGE

The impacts of climate change on oceans—rising sea levels, coastal erosion, changing ocean current patterns, and acidification—are staggering. At the same time, **oceans are an important carbon sink** and help mitigate climate change.

WASTE MANAGEMENT

80% of litter in the ocean is from land-based sources. Better waste management on land can help oceans recover.

The Blue Economy:

Developing the Blue Economy Robert C. Brears, 2021-10-20 Traditionally the ocean economy is viewed solely as a mechanism for economic growth. In this business as usual approach large scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources often without consideration of how those activities impact the future health or productivity of those same resources. This has led to aquatic ecosystems being viewed and treated as limitless resources, the marine environment becoming a dumping ground for waste, overfishing diminishing fishing stocks, ocean habitats being degraded from coastal developments, sea level rise impacting coastal communities and infrastructure, increasing ocean acidification and the marginalisation of poor coastal communities. Recognising the failings of the traditional ocean economy, there is a transition underway around the world towards the Blue Economy. This concept moves beyond the business as usual approach with economic development and ocean health complementary to one another. In the Blue Economy, the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced. Therefore, economic activity is in balance with the long term capacity of the ocean ecosystems to support this activity and remain healthy and resilient. This book will provide an overview of the various technologies used to promote cross sectoral and multi scalar collaboration, facilitate the integrated management of sectors and resources, foster partnerships between governments and industry, encourage R D in new technologies in resource use and management, and scale up innovative financing mechanisms in the development of a Blue Economy. Also, the book will contain in depth case studies that illustrate how locations of differing climates, lifestyles and income levels have implemented technologies to facilitate the development of the Blue Economy. *Developing the Blue Economy* will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy.

The Blue Economy Gunter A. Pauli, 2010 Dr Gunter Pauli is challenging the green movement; he has been so much a part of it to do better, to do more. He is the entrepreneur who launched Ecover; those products are probably in many of your homes. He built the largest ecologically sound factory in the world. His participation in the Club of Rome and the founding of Zero Emissions Research Institute (ZERI) has made an immense contribution to sustainability both in terms of research, public awareness and articulating a visionary direction. He has dedicated himself to teaching and the hands on implementation of projects that have brought healthy environments, good nutrition, health care and jobs in sustainable commerce to a myriad of places in the world.

Tracing the Blue Economy Awni Behnam,2013-11-02 Forming part of the Fondation de Malte s LUMEN Monograph Series in this text Dr Awni Behnam President of the International Ocean Institute and former Assistant Secretary General of the United Nations explores how we must live with the ocean and from the ocean in a sustainable relationship The interconnectedness of emerging global challenges is forcing a policy dimension change in the form of the Blue Economy as an integrated approach to the governance of the ocean and urban interface revolving around the human dimension The paradigm shift came when Elisabeth Mann Borgese founder of the International Ocean Institute viewed the situation from the seaward side where a sustainable ocean economy integrates with and is inclusive of the Green Economy She famously stated if before you saw the sea and the sea floor as a continuation of the land you now see the land as a continuation of the sea the concept of the Blue Economy is an attempt to do justice to that genius vision The Blue Economy United States Senate,Committee on Commerce Science (senate),United States. Congress,2019-09-05 The blue economy the role of the oceans in our nation s economic future hearing before the Subcommittee on Oceans Atmosphere Fisheries and Coast Guard of the Committee on Commerce Science and Transportation United States Senate One Hundred Eleventh Congress first session June 9 2009 **The Empty Sea** Ilaria Perissi,Ugo Bardi,2021-02-12 The Blue Economy is used to describe all of the economic activities related to the sea with a special emphasis on sustainability Traditional activities such as fisheries but also undersea mining tourism and scientific research are included as well as the phenomenal growth of aquaculture during the past decade All of these activities and the irresistible prospect of another new frontier has led to enthusiastic and most likely overenthusiastic assessments of the possibilities to exploit the sea to feed the world provide low cost energy become a new source of minerals and other future miracles This book makes sense of these trends and of the future of the blue economy by following our remote ancestors who gradually discovered the sea and its resources describing the so called fisherman s curse or why fishermen have always been poor explaining why humans tend to destroy the resources on which we depend and assessing the realistic expectations for extracting resources from the sea Although the sea is not so badly overexploited as the land our demands on ecosystem services are already above the oceans sustainability limits Some new ideas including

fishing down for untapped resources such as plankton could lead to the collapse of the entire marine ecosystem How Neanderthals crossed the sea in canoes how it was possible for five men on a small boat to kill a giant whale what kind of oil the virgins of the Gospel put into their lamps how a professor of mathematics Vito Volterra discovered the equations of fishing why it has become so easy to be stung by a jellyfish while swimming in the sea and how to play Moby Dick a simple board game that simulates the overexploitation of natural resources are just some of the questions that you will be able to answer after reading this engaging and insightful book about the rapidly expanding relationship between humanity and the sea

The Caribbean Blue Economy Peter Clegg, Robin Mahon, Patrick McConney, Hazel A. Oxenford, 2020-10-22 The Blue Economy is emerging on the global scene as a powerful and persuasive new concept for sustainable development based on economic activities associated with the ocean Several regions globally have adopted this concept at national and regional levels including the Caribbean Given the complex multisectoral and multilevel nature of the Blue Economy it is clear that different approaches will be needed for different regions Hence this volume explores the opportunities threats and risks involved in operationalising the Blue Economy in the Wider Caribbean Region defined as northern Brazil to the USA and all mainland and island countries and territories in between The first part of the book looks at where the region stands in the global picture regarding adoption of the Blue Economy and what is planned The second set of chapters examines key crosscutting issues such as ecosystem services climate change and governance at national and regional levels that could make or break the Blue Economy initiative The book then goes on to explore the main sectoral activities that will constitute the Blue Economies in the region fisheries tourism shipping and transport renewable energy oil and gas seabed mining and waste management are all considered The book ends with a synthesis of the political and technical requirements to overcome threats and take advantage of opportunities in the Blue Economy
