Intellectual Disabilities Silvia Lanfranchi, Barbara Carretti, 2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes *Cognitive Approaches To Automated Instruction* J. Wesley Regian, Valerie J. Shute, Valerie Shute, 2013-05-13 Useful to researchers as well as practitioners looking for guidance on designing automated

instruction systems this book provides a snapshot of the state of the art in this research area In so doing it focuses on the two critical problems first diagnosis of the student s current level of understanding or performance and second selection of the appropriate intervention that will transition the student toward expert performance Containing a comprehensive set of principled approaches to automated instruction diagnosis and remediation it is the first volume on the topic to provide specific detailed guidance on how to develop these systems Leading researchers and practitioners represented in this book address the following questions in each chapter What is your approach to cognitive diagnosis for automated instruction What is the theoretical basis of your approach What data support the utility of the approach What is the range of applicability of your approach What knowledge engineering or task analysis methods are required to support your approach Referring to automated instruction as instruction that is delivered on any microprocessor based system the contributors to and editors of this book believe that it is possible for automated instructional systems to be more effective than they currently are Specifically they argue that by using artificial intelligence programming techniques it is possible for automated instructional systems to emulate the desirable properties of human tutors in one on one instruction
