Alien Gene Transfer in Crop Plants, Volume 1 Aditya Pratap, Jitendra Kumar, 2013-11-01 Genetic engineering and biotechnology along with conventional breeding have played an important role in developing superior cultivars by transferring economically important traits from distant wild and even unrelated species to the cultivated varieties which otherwise could not have been possible with conventional breeding. There is a vast amount of literature pertaining to the genetic improvement of crops over last few decades. However the wonderful results achieved by crop scientists in food legumes research and development over the years are scattered in different journals of the World. The two volumes in the series *Alien Gene Transfer in Crop Plants* address this issue and offer a comprehensive reference on the developments made in major food crops of the world. These volumes aim at bringing the contributions from globally renowned scientists at one platform in a reader friendly manner. The 1st volume entitled *Alien Gene Transfer in Crop Plants: Innovations, Methods and Risk Assessment* will deal exclusively with the process and methodology. The contents of this volume have been designed to appraise the readers with all the theoretical and practical aspects of wide hybridization and gene transfer like processes and methods of gene transfer, role of biotechnology with special reference to embryo rescue, genetic transformation, protoplast fusion and molecular marker technology, problems such as cross incompatibility and barriers to distant hybridization and solutions to overcome them. Since wild and weedy relatives of crop plants may have negative traits associated with them, there are always possibilities of linkage drag while transferring alien alleles. Therefore problems and limitations of alien gene transfer from these species will also be discussed in this series. Further the associated risks with this and assessment of risks will also be given due weightage. Manual de bibliografía de la literatura española José Simón Díaz, 1980 Host Bibliographic Record for Bound with Item Barcode 30112044669122 and Others, 2013 Vaccines for Biodefense and Emerging and Neglected Diseases Alan D.T. Barrett, Lawrence R. Stanberry, 2009-03-05 The last 20 years has seen a rapid increase in infectious diseases particularly those that are termed emerging diseases such as SARS, neglected diseases such as malaria and those that are deemed biothreats such as anthrax. It is well recognized that the most effective modality for preventing infectious diseases is vaccination. This book provides researchers with a better understanding of what is currently known about these diseases including whether there is a vaccine available or under development. It also informs readers of the key issues in development of a vaccine for each disease. Provides a comprehensive treatise of the agents that are responsible for emerging and neglected diseases and those that can be used as biothreats. Includes the processes such as the vaccine development pathway, vaccine manufacturing and regulatory issues that are critical to the generation of these vaccines to the marketplace. Each chapter will include a map of the world showing where that particular disease is naturally found. **Popular Photography**, 1981-03 Air Trails Pictorial, 1943-04 Popular Photography, 1991-01 **Journal of the American Medical Association** American Medical Association, 1903 Includes proceedings of the Association papers.
