Fuel Consumption Estimation and Optimal Traffic Signal Timing Tsai-Yun Liao,Randy B. Machemehl,1998 The objectives of this report are to develop an analytical model to estimate fuel consumption and to investigate the effects of signal timing on fuel consumption Several numerical experiments including a variety of geometric configurations traffic conditions and signal timing are conducted to test the AFCM estimation capability and to investigate the effects of signal timing on fuel consumption The results from these experiments indicate that total fuel consumption with respect to signal cycle time possesses a convex pattern In order to analytically establish the relationship between fuel consumption and signal timing a three term form is reduced from the AFCM to represent major effects of vehicle characteristics traffic behavior and fuel consumption parameters on optimal cycle length The first term represents vehicle ideal fuel consumption the second term describes vehicle fuel consumption during acceleration after a stop and the third term accounts for stochastic effects Numerical analysis and comparisons show that the optimal cycle lengths from the expression are rather close to those from the AFCM **Index to Current Urban Documents** ABC-CLIO, LLC,2001 **Aircraft Accident Reports** ,1975 *Report* ,1985 **Commercial News USA.** ,1982 *Report on the Transportation Business in the United States at the Eleventh Census: 1890* Adams,1894 *Report on Transportation Business in the United States at the Eleventh Census: Transportation by water* United States.
