

## PRODUCT SPECIFICATIONS

The static thrust calculation is taken from the October 86 AMA magazine. air density is based on 29.92 in Hg. and propeller pitch is not used in this calculation. Practical tests revealed very little if any change in thrust due to pitch variation at the same RMP.

It is believed that this is partly due to any increase in thrust being negated by blade stalling and a more turbulent influx area with increased pitch. This obviously only applies to static conditions, not flying conditions.
