Production Processes and Product Evolution in the Age of Disruption Francesco Gabriele Galizia, Marco Bortolini, 2023-08-07 This book includes state of the art and original research contributions from two well established conferences which collectively focus on the joint design development and management of products advanced production systems and business for sustainable customization and personalization The book includes wide range of topics within these subjects ranging from industrial success factors to original contributions within the field The authors represent worldwide leading research institutions

Reliability Technology Norman Pascoe, 2011-04-25 A unique book that describes the practical processes necessary to achieve failure free equipment performance for quality and reliability engineers design manufacturing process and environmental test engineers This book studies the essential requirements for successful product life cycle management It identifies key contributors to failure in product life cycle management and particular emphasis is placed upon the importance of thorough Manufacturing Process Capability reviews for both in house and outsourced manufacturing strategies The readers attention is also drawn to the many hazards to which a new product is exposed from the commencement of manufacture through to end of life disposal Revolutionary in focus as it describes how to achieve failure free performance rather than how to predict an acceptable performance failure rate reliability technology rather than reliability engineering Author has over 40 years experience in the field and the text is based on classroom tested notes from the reliability technology course he taught at Massachusetts Institute of Technology MIT USA Contains graphical interpretations of mathematical models together with diagrams tables of physical constants case studies and unique worked examples

METAL CASTING AND JOINING JOHN, K. C., 2015-01-02 Designed for the undergraduate students of mechanical engineering and allied branches this book serves as a bridge between the study of the basic processes and their application in production industries This book covers two similar fundamental processes foundry and welding in a single volume The chapters of the book are grouped in seven modules A separate module is devoted to introduce the preliminaries of the two areas namely casting and joining processes

Miscellaneous welding and allied processes including the modern methods and thermal cutting conventional sand mould casting special and modern casting methods conventional metal joining processes and theory of solidification of metal its metallurgy defects in castings and casting design procedure are covered in the book The theory of each process is explained with the help of simple line sketches which can be easily reproduced by a student at the time of examination Enough worked out examples and problems are given for practice especially in the design areas At the end of each chapter sufficient number of review questions are given as exercise
