Penrose Tiles to Trapdoor Ciphers...and the Return of Dr. Matrix Martin Gardner, 2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists Gardner in his

crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him These columns were both a revelation and a gift when he wrote them no one before Gardner had written about mathematics like this They continue to be a marvel This volume was originally published in 1989 and contains columns from published 1976 1978 This 1997 MAA edition contains three new columns written specifically for this volume including the resurrection of the lamented Dr Matrix

Handbook of Test Problems in Local and Global Optimization Christodoulos A. Floudas, Panos M. Pardalos, Claire Adjiman, William R. Esposito, Zeynep H. Gümüs, Stephen T. Harding, John L. Klepeis, Clifford A. Meyer, Carl A. Schweiger, 2013-03-09 Significant research activities have taken place in the areas of local and global optimization in the last two decades Many new theoretical computational algorithmic and software contributions have resulted It has been realized that despite these numerous contributions there does not exist a systematic forum for thorough experimental computational testing and evaluation of the proposed optimization algorithms and their implementations Well designed nonconvex optimization test problems are of major importance for academic and industrial researchers interested in algorithmic and software development It is remarkable that even though nonconvex models dominate all the important application areas in engineering and applied sciences there is only a limited class of reported representative test problems This book reflects our long term efforts in designing a benchmark database and it is motivated primarily from the need for nonconvex optimization test problems The present collection of benchmarks includes test problems from literature studies and a large class of applications that arise in several branches of engineering and applied science
