Mittal,2012-12-31 In this series Rajiv Kohli and Kash Mittal have brought together the work of experts from different industry
sectors and backgrounds to provide a state of the art survey and best practice guidance for scientists and engineers engaged
in surface cleaning or dealing with the consequences of surface contamination This volume complements Volumes 3 and 4 of
this series which focused largely on particulate contaminants The expert contributions in this volume cover methods for
removal of non particulate contaminants such as metallic and non metallic thin films hydrocarbons toxic and hazardous
chemicals and microbiological substances as well as contamination monitoring in pharmaceutical manufacturing and an
innovative method for characterization at the nanoscale Comprehensive coverage of innovations in surface contamination
and cleaning Written by established experts in the contamination and cleaning field Each chapter is a comprehensive review
of the state of the art Case studies included *Vocational-technical Learning Materials* Bruce Reinhart,1974
Introduction to Manufacturing Processes John A. Schey,1987 This revision aims to address changes that have taken
effect since the publication of the second edition The most significant change has been in the attitude of industry to
concurrent engineering In 1987 mostly lip service was paid to it today it has become general practice in most competitive
corporations In the second edition the author discussed this as the manufacturing system In the third edition it becomes the
focal point Concurrent engineering involves the whole product realization process including product concept performance
criteria mechanical design and analysis materials selection process planning and modeling production control automation
assembly management and others An introductory text cannot possibly cover all of these topics hence the emphasis of the
third edition remains on the physical principles and the application of these principles to processes The major difference
relative to the second edition will be the emphasis on interactions between process and design Capabilities and limitations of
processes will be highlighted to show what they mean in terms of design possibilities and design modifications will be
suggested for ease of manufacture Impact on the environment and possibilities for recycling will be woven into the entire
