To Eat The World:

How to Eat Right & Save the Planet Bill Tara, 2020-01-03 In no other book will you find such a comprehensive discussion of the key factors that should be driving our food choices J Morris Hicks author of *Healthy Eating Healthy World* This is an absolute must read for anyone who is concerned about the environment suffering of animals and human and non human health Anteneh Roba MD Founder of the International Fund for Africa The ethical wasteland of Big Business Big Medicine Power Politics and Advertising has manufactured a diet that is the root cause of so many diseases including diabetes heart disease and cancer as well as a broad range of common ailments It has also created an industry that kills over 70 billion land animals every year Too few of us realize how our food choices actually contribute to the climate change we are now experiencing worldwide Recognizing and understanding the impact of our food choices is the first important step in reversing habits that damage the body heart and soul How to Eat Right and Save the Planet cuts through the hype and nutritional confusion that surround us by first showing how they hide the truth It then explains how the food that we eat can be a massive force for good in creating personal social and environmental health The author not only provides vital nutritional facts based on the latest dietary and medical research but also explains in plain English how our diet impacts social justice and environmental sustainability How to Eat Right and Save the Planet offers a complete guide to creating a healthy and earth friendly diet for you and your family With this book in hand you will understand that each of us can take back control of our health our family s health and to a great degree the health of this planet and it can all begin with our next meal **The World's Work**, 1924 **Eat the Sky, Drink the Ocean** Kirsty Murray, Payal Dhar, Anita Roy, 2015-01-25 Be transported into dystopian cities and alternate universes Hang out with unicorns cyborgs and pixies Learn how to waltz in outer space Be amazed and beguiled by a fairy tale with an unexpected twist a futuristic take on a TV cooking show and a playscript with tentacles In other words get ready for a wild ride This collection of sci fi and fantasy writing including six graphic stories showcases twenty of the most exciting writers and artists from India and Australia in an all female all star line up Published by Zubaan **Would You Rather...? foodie but a form of reverence Enchanting Molly Young The New York Times Dan Saladino's *Eating to Extinction* is the prominent broadcaster's pathbreaking tour of the world's vanishing foods and his argument for why they matter now more than ever Over the past several decades globalization has homogenized what we eat and done so ruthlessly The numbers are stark Of the roughly six thousand different plants once consumed by human beings only nine remain major staples today Just three of these rice wheat and corn now provide fifty percent of all our calories Dig deeper and the trends are more worrisome still The source of much of the world's food seeds is mostly in the control of just four corporations Ninety five percent of milk consumed in the United States comes from a single breed of cow Half of all the world's cheese is made with bacteria or enzymes made by one company And one in four beers drunk around the world is the product of one brewer If it strikes you that everything is starting to taste the same wherever you are in the world you're by no means alone This matters when we lose diversity and foods become endangered we not only risk the loss of traditional foodways but also of flavors smells and textures that may never be experienced again And the consolidation of our food has other steep costs including a lack of resilience in the face of climate change pests and parasites Our food monoculture is a threat to our health and to the planet In *Eating to Extinction* the distinguished BBC food journalist Dan Saladino travels the world to experience and document our most at risk foods before it's too late He tells the fascinating stories of the people who continue to cultivate forage hunt cook and consume what the rest of us have forgotten or didn't even know existed Take honey not the familiar product sold in plastic bottles but the wild honey gathered by the Hadza people of East Africa whose diet consists of eight hundred different plants and animals and who communicate with birds in order to locate bees nests Or consider murnong once the staple food of Aboriginal Australians this small root vegetable with the sweet taste of coconut is undergoing a revival after nearly being driven to extinction And in Sierra Leone there are just a few surviving *stenophylla* trees a plant species now considered crucial to the future of coffee From an Indigenous American chef refining precolonial recipes to farmers tending Geechee red peas on the Sea Islands of Georgia the individuals profiled in *Eating to Extinction* are essential guides to treasured foods that have endured in the face of rampant sameness and standardization They also provide a roadmap to a food system that is healthier more robust and above all richer in flavor and meaning
