Scientific and Technical Books and Serials in Print, 1989. **The Construction of Optimal Stated Choice Experiments** Deborah J. Street, Leonie Burgess, 2007-07-13. The most comprehensive and applied discussion of stated choice experiment constructions available. *The Construction of Optimal Stated Choice Experiments* provides an accessible introduction to the construction methods needed to create the best possible designs for use in modeling decision making. Many aspects of the design of a generic stated choice experiment are independent of its area of application, and until now there has been no single book describing these constructions. This book begins with a brief description of the various areas where stated choice experiments are applicable, including marketing and health economics, transportation, environmental resource economics, and public welfare analysis. The authors focus on recent research results on the construction of optimal and near optimal choice experiments and conclude with guidelines and insight on how to properly implement these results. Features of the book include: Construction of generic stated choice experiments for the estimation of main effects only, as well as experiments for the estimation of main effects plus two factor interactions; Constructions for choice sets of any size and for attributes with any number of levels; A discussion of designs that contain a none option or a common base option; Practical techniques for the implementation of the constructions; Class tested material that presents theoretical discussion of optimal design; Complete and extensive references to the mathematical and statistical literature for the constructions; Exercise sets in most chapters which reinforce the understanding of the presented material. *The Construction of Optimal Stated Choice Experiments* serves as an invaluable reference guide for applied statisticians and practitioners in the areas of marketing, health economics, transport, and environmental evaluation. It is also ideal as a supplemental text for courses in the design of experiments.
