

Solving Inequalities

Solving inequalities is similar to solving equations, but where an equation has one unique solution, an inequality has a range of solutions.

To solve an inequality we calculate the values that an unknown variable can be in that inequality.

 **Example** $2x + 1 < 9$
 $2x < 8$
 $x < 4$

Multiplying or dividing by a negative number **changes the direction of the inequality**.

 **Example** $1 - 2x < 9$
 $-2x < 8$
 $x > -4$
