

#5 Solve using the quadratic formula.

$$2x + 1 = x^2$$

$$-x^2 + 2x + 1 = 0$$

$$a = -1, b = 2, c = 1$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$x = \frac{-(2) \pm \sqrt{(2)^2 - 4(-1)(1)}}{2(-1)}$$

$$x = \frac{-2 \pm \sqrt{4 + 4}}{-2}$$

$$x = \frac{-2 \pm \sqrt{8}}{-2}$$

$$x = \frac{-2 \pm 2\sqrt{2}}{-2}$$

Exact  
Solution

$$x = 1 \pm \sqrt{2}$$

$$x \approx 1 \pm 1.41$$

Östmyren, 2018-03-15 In this book I present a unique formula for quadratic equations which is a rewriting of the p q formula This rewriting resulted in the equations being solved almost twice as fast by the new formula when it was compared in a test with the p q formula Another test also showed that the new formula was much faster than the Vedic formula The new formula is unique because the equations in the test were solved by mere mental calculation which improves the memory and increases mental agility and intelligence When I discovered that the middle coefficient in a quadratic equation contains all information about its origin it led to a rule that simplified the solving of all equations In a quadratic equation the origin could be located and then it became possible to create a rule how the coefficients were to be split up into factors By means of this rule and some exercises the answer to an equation can be both calculated and checked regardless of how large the coefficients are This universal method is intended to be used before the equation is solved by a formula Since the origin of a quadratic equation could be located it was also simple to find the origin to other types of equations and therefore new methods could be created This led to the fact that a cubic equation could be solved without taking detours like polynomial division a guess or a test of a root When the origin of an equation can be located it is as easy to solve a fifth degree equation as a quadratic equation in the same simple way as unlocking a safe with a key The purpose of the book is mainly to make it as simple as possible for the students to solve equations but also to give them a good insight into the origin of an equation

*Peter Chew Method For Quadratic Equation [2nd Edition]* Peter Chew, 2023-03-29 The Peter Chew Method for Quadratic Equations is a simple and efficient approach for solving quadratic equations problem Its objective is to make it easier for the upcoming generation to solve quadratic equations including higher order function problems that cannot be solved by current methods The French mathematician Veda established the relationship between the equation root and the coefficient in 1615 Veda s theorem states that if and are two roots of the quadratic equation  $ax^2 + bx + c = 0$  and  $a \neq 0$  Then the sum of the two roots  $b/a$  the product of the two roots  $c/a$  The current method for solving quadratic equations involves finding the values of and using Veda s theorem and then converting the problem given into the and forms and then substituting the values of and to the problem given obtain the answer However this method is inadequate for solving higher order function quadratic equations since it is difficult to convert them into and forms With the Peter Chew method we can solve higher order function quadratic equations without the need to convert them into and forms Additionally this approach is applicable to quadratic equations with complex roots and complex coefficients The Peter Chew method involves finding the roots of the quadratic equation denoting them as and and then substituting these values to the problem given to find the answer
