South African Military Skills Development Application Form 2015 16:

South Africa's Post-Apartheid Military Lindy Heinecken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security political and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented and what does this mean for defence in a democracy? This book presents an overview of the security environment, how the mission focus of the military has changed and the implications for force procurement, force preparation, force employment and force sustainability. The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force, the effect of affirmative action on meritocracy, recruitment and retention, military veterans looking at the difficulties they face in reintegrating back into society and finding gainful employment, gender equality and mainstreaming, the rise of military unions and why a confrontational instead of a more corporatist approach to labour relations has emerged, HIV/AIDS and the consequences this holds for the military in terms of its operational effectiveness. In closing, the author highlights key events that have caused the SANDF to become lost in transition and transformation, spelling out some lessons learned. The conclusions she draws are pertinent for the future of defence security and civil-military relations of countries around the world.

Quantitative History and Uncharted People Johan Fourie, 2023-08-10 One of the biggest challenges in the study of history is the unreliable nature of traditional archival sources which omit histories of marginalised groups. This book makes the case that quantitative history offers a way to fill these gaps in the archive. Showcasing 13 case studies from the South African past, it applies quantitative sources, tools and methods to social histories from below to uncover the experiences of unchartered peoples. Examining the occupations of slaves, victims of the Spanish flu, health of schoolchildren and more, it shows how quantitative tools can be particularly powerful in regions where historical records are preserved but questions of bias and prejudice pervade. Applying methods such as GIS mapping, network analysis and algorithmic matching techniques, it explores histories of indigenous peoples, women, enslaved peoples and other groups marginalised in South African history.

Connecting quantitative sources and new forms of data interpretation with a narrative social history this book offers a fresh approach to quantitative methods and shows how they can be used to achieve a more complete picture of the past
