Report of the workshop on development of aquaculture insurance system for small-scale farmers, Bangkok, Thailand, 20-21 September 2016 Food & Agriculture Organization, 2018-11-14. The regional workshop Development of Aquaculture Insurance System for Small scale Farmers 20-21 September 2016 Bangkok was joined by participants from China, Philippines, Thailand and Viet Nam. It contains two parts. The first aimed at answering the question: What would make insurance available for and accessible to small scale farmers? The second was focused on exploring potential shrimp insurance schemes. The Workshop achieved the following outcomes: 1. made farmers, farmer advisers, researchers and academics more familiar with the business and technical requirements of insurers; 2. made insurers become more familiar with the circumstances and needs of farmers; 3. confirmed that insurers continue to view aquaculture as a high risk industry; 4. highlighted the need to incorporate risk assessment and management in the development of better farm management practices in line with the requirements of insurance; and 5. confirmed the usefulness of bundling financial products in the development of institutional services for farmers. *Fish for the People*, 2008. Fish Production in Irrigation Canals Theresa A. Redding, Alex B. Midlen, 1991-01-01. This publication reviews the potential for fisheries production from irrigation canals. It deals with the subject under the following major headings: engineering aspects of irrigation systems; factors limiting fish production in canals; weed growth and associated problems in irrigation canals; Cage culture in irrigation canals is presented in case studies for Indonesia, Egypt and Thailand; and pen culture in China. Both cage and pen culture are considered to be the most suitable forms of aquaculture in irrigation canals. Fish can be profitably and successfully reared in irrigation canals to control unwanted aquatic weed growth and there is some potential for the use of fish to control vectors and hosts of waterborne diseases. Amongst the constraints, levels of pesticides in fish tissues cultured in irrigation systems could be a problem in the development of foodfish production in irrigation canals. The major constraint to aquaculture development in such systems is that a continuous, preferably constant flow of water is required throughout the culture period and this is not available in many irrigation systems.
