ERP and Supply Chain Management Christian Ndubisi Madu, Chu-hua Kuei, 2005-06-10

Businesses today are faced with avalanche of information There is need to effectively manage information to serve customers better In today's highly competitive environment businesses need to be able to organize and coordinate their information so that a single view of information is maintained by all the service channels Information management can help to understand customers wants and needs and integrate such in product design It helps to manage inventory and reduces both cost and the cycle time to introduce new products to the marketplace Time to market is a critical issue in achieving competitiveness and without the availability of timely and accurate information it will not be possible to respond proactively to the changing market environment This book is about ERP and Supply Chain Management ERP is the short form for Enterprise Resource Planning The aim of ERP is to integrate the functions of the different business units and departments such as finance operations accounting and human resources This integration is necessary to organize and coordinate information that may be scattered in different departments and making them available in an organized format to the different decision centers where they may be needed Through this integrative approach the different functional units of the business are able to share a common database exchange information and have consistent view of their operations This consistent view is also presented to the customer thus improving the quality of customer service With the integration of the information system the different functional departments work together to achieve common organizational goals and objectives Without such integration common customer services such as order processing would be difficult to track and inconsistent information may be relayed by the different departments to the customer Supply chain management is an integral aspect of ERP Businesses today focus on their core competence It is no longer technically and economically feasible to focus on all activities Rather certain activities may be shifted to partners or vendors that have core competence in such areas Mercedes Benz may find it better to subcontract its radios to Bose while focusing on its car designing Yet these two companies may need to share key information on customers wants and needs as well as information on product designs Integrating a supplier into the common database

helps in providing quality products and services that will satisfy the needs of the customer Information technology plays a critical role in effective development of ERP system As many businesses develop online marketplace it becomes even more important to develop a single view of transactions to all value chain partners including customers manufacturer suppliers and other vendors This book therefore adopts a focus on ERP and Supply Chain Management to develop better plans to better serve the customer It adopts a management and a systemic perspective of these issues and does not deal with the software aspects of ERP The focus is on the fundamentals rather than on the advanced issues The book is intended to help managers executives and students to understand the basic concepts of ERP and Supply Chain Management

Elements of the Swiss Market for Electricity Massimo Filippini, 2012-12-06 1 1 Economic issues to be analyzed This research examines two elements of the Swiss market

for electricity the residential electricity demand by time of use and the cost structure of municipal electricity distribution utilities The empirical results of demand and cost elasticities allow the investigation of interesting economic and policy issues such as the desirability of a widespread introduction of time of use pricing for residential customers the desirability of side by side competition in the distribution of electricity and more generally the economic effects of a reduction of the load factor and of mergers between electric distribution utilities on costs Desirability of time of use pricing In the last decade there has been an intensifying debate in Switzerland about efficacy of electricity rate reforms in order to improve the efficiency of electricity use This debate was initiated by two main events First there was an important growth of electricity consumption Second the Chernobyl accident in 1986 aroused widespread public concern about the problems associated with nuclear power and waste disposal As a result in 1991 the Swiss voted in a referendum a 10 year moratorium on the construction of new nuclear power plants Moreover plans to expand production of hydroelectric power construction of new dams or expanding existing ones have been stiffly opposed by environmental groups These developments have consistently curtailed potential expansion of domestic electricity supply As a result Switzerland during the winter has to import electricity from foreign countries
