Contemporary Research and Perspectives on Early Childhood Mathematics Education Iliada Elia, Joanne Mulligan, Ann Anderson, Anna Baccaglini-Frank, Christiane Benz, 2018-02-21 This book brings together a collection of research based papers on current issues in early childhood mathematics education that were presented in the Topic Study Group 1 TSG 1 at the 13th International Congress on Mathematical Education ICME 13 held at the University of Hamburg in 2016 It will help readers understand a range of key issues that early childhood mathematics educators encounter today Research on early childhood mathematics education has grown in recent years due in part to the well documented positive relation between children s early mathematical knowledge and their later mathematics learning and to the considerable emphasis many countries are now placing on preschool education The book addresses a number of central questions including What is mathematical structural development and how can we promote it in early childhood How can multimodality and embodiment contribute to early mathematics learning and to acquiring a better understanding of young children s mathematical development How can children s informal mathematics related experiences affect instruction and children s learning in different mathematics content areas What is the role of tools including technology and picture books in supporting early mathematics learning What are the challenges in early childhood mathematics education for teachers education and professional development *Indian Trade Journal* ,2012-05-05 *Slow Burn* R. Jisung Park,2025-07-29 How the subtle but significant consequences of a hotter planet have already begun from lower test scores to higher crime rates and how we might tackle them today It s hard not to feel anxious about the problem of climate change especially if we think of it as an impending planetary catastrophe In *Slow Burn* R Jisung Park encourages us to view climate change through a different lens one that focuses less on the possibility of mass climate extinction in a theoretical future and more on the everyday implications of climate change here and now Drawing on a wealth of new data and cutting edge economics Park shows how climate change headlines often miss some of the most important costs When wildfires blaze what happens to people downwind of the smoke When natural disasters destroy buildings and bridges what happens to educational outcomes Park explains how climate change operates as the silent accumulation of a thousand tiny conflagrations imperceptibly elevated

health risks spread across billions of people pennies off the dollar of productivity fewer opportunities for upward mobility By investigating how the physical phenomenon of climate change interacts with social and economic institutions Park illustrates how climate change already affects everyone and may act as an amplifier of inequality Wealthier households and corporations may adapt quickly but without targeted interventions less advantaged communities may not Viewing climate change as a slow and unequal burn comes with an important silver lining It puts dollars and cents behind the case for aggressive emissions cuts and helps identify concrete steps that can be taken to better manage its adverse effects We can begin to overcome our climate anxiety Park shows us when we begin to tackle these problems locally **The Good Death**

Ann Neumann,2017-02-07 Following the death of her father journalist and hospice volunteer Ann Neumann sets out to examine what it means to die well in the United States When Ann Neumann s father was diagnosed with non Hodgkin s lymphoma she left her job and moved back to her hometown of Lancaster Pennsylvania She became his full time caregiver cooking cleaning and administering medications When her father died she was undone by the experience by grief and the visceral quality of dying Neumann struggled to put her life back in order and found herself haunted by a question Was her father s death a good death The way we talk about dying and the way we actually die are two very different things she discovered and many of us are shielded from what death actually looks like To gain a better understanding Neumann became a hospice volunteer and set out to discover what a good death is today She attended conferences academic lectures and grief sessions in church basements She went to Montana to talk with the attorney who successfully argued for the legalization of aid in dying and to Scranton Pennsylvania to listen to pro life groups who believe the removal of feeding tubes from some patients is tantamount to murder Above all she listened to the stories of those who were close to death What Neumann found is that death in contemporary America is much more complicated than we think Medical technologies and increased life expectancies have changed the very definition of medical death And although death is our common fate it is also a divisive issue that we all experience differently What constitutes a good death is unique to each of us depending on our age race economic status culture and beliefs What s more differing concepts of choice autonomy and consent make death a contested landscape governed by social medical legal and religious systems In these pages Neumann brings us intimate portraits of the nurses patients bishops bioethicists and activists who are shaping the way we die The Good Death presents a fearless examination of how we approach death and how those of us close to dying loved ones live in death s wake *Grade Trend of*

that increasing instructional time is a viable option In addition to extending the school day some educational leaders have looked to modifying the traditional academic calendar to address some of the academic losses that occur when students have 8 10 weeks of summer vacation each year Re examining how students spend their summer vacation although considered by many to be a cultural taboo may be the answer to addressing global competition and decreasing the national achievement gap The need for a two month break from schools harkens back to a pre industrial time that no longer is pertinent for our students Although an answer may be staring us in the face are we willing to give up on the American tradition of summer vacation all in the name of reform and student success

Handbook of Research on Teacher Practices for Diverse Writing Instruction Hodges, Tracey S.,2022-05-20 The art and practice of writing is complex and multidimensional students often apply unique writing styles As such educators must apply focused teaching methods to nurture these unique forms of writing Educators must stay up to date with the practices for diverse writing instruction in order to best engage with a diverse classroom However resources related to writing typically do not focus on the depth and breadth of writing and there is a need for a resource that offers a comprehensive look at diverse writing instruction research The Handbook of Research on Teacher Practices for Diverse Writing Instruction provides a rich discussion of the issues perspectives and methods for writing instruction currently in use with an added lens focusing on diversity and equity It provides unique coverage on the topic of writing instruction for practical implementation within the classroom setting Covering topics such as student motivation curriculum development and content area instruction this major reference work is an essential resource for preservice teachers faculty and administration of K 12 and higher education academic libraries government officials school boards researchers and academicians

Image-Guided Radiotherapy for Effective Radiotherapy Delivery Nam Phong Nguyen,Ulf Lennart Karlsson,2016-04-22 Image guided radiotherapy IGRT is a new radiotherapy technology that combines the rapid dose fall off associated with intensity modulated radiotherapy IMRT and daily tumor imaging allowing for high precision tumor dose delivery and effective sparing of surrounding normal organs The new radiation technology requires close collaboration between radiologists nuclear medicine specialists and radiation oncologists to avoid marginal miss Modern diagnostic imaging such as positron emission tomography PET scans positron

emission tomography with Computed Tomography PET CT and magnetic resonance imaging MRI allows the radiation oncologist to target the positive tumor with high accuracy As the tumor is well visualized during radiation treatment the margins required to avoid geographic miss can be safely reduced thus sparing the normal organs from excessive radiation When the tumor is located close to critical radiosensitive structures such as the spinal cord IGRT can deliver a high dose of radiation to the tumor and simultaneously decreasing treatment toxicity thus potentially improving cure rates and patient quality of life During radiotherapy tumor shrinkage and changes of normal tissues volumes can be detected daily with IGRT The volume changes in the target volumes and organs at risk often lead to increased radiation dose to the normal tissues and if left uncorrected may result in late complications Adaptive radiotherapy with re planning during the course of radiotherapy is therefore another advantage of IGRT over the conventional radiotherapy techniques This new technology of radiotherapy delivery provides the radiation oncologist an effective tool to improve patient quality of life In the future radiation dose escalation to the residual tumor may potentially improve survival rates Because the treatment complexity a great deal of work is required from the dosimetry staff and physicists to ensure quality of care Preliminary clinical results with IGRT are encouraging but more prospective studies should be performed in the future to assess the effectiveness of IGRT in improving patient quality of life and local control In this Frontiers Research Topic we encourage submission of original papers and reviews dealing with imaging for radiotherapy planning the physics and dosimetry associated with IGRT as well as the clinical outcomes for cancer treatment with IGRT for all tumor sites
