**Powerfuels** Nils Bullerdiek, Ulf Neuling, Martin Kaltschmitt, 2024-12-05 Powerfuels are the subject of intense and often contentious current discussions within industry research politics as well as the overall society These discussions primarily revolve around the practical and technical feasibility of power to X processes and applications their economic viability the respective environmental benefits the contribution to climate protection as well as the social acceptability Thus the primary aim of this book is to provide a comprehensive overview of various aspects diverse considerations and different perspectives regarding the future role and utilization of power to X pathways on a global scale This encompasses the challenge of sourcing necessary educts feedstock options their conversion into different products and product groups exploring the possibilities of using these electricity based fuels hydrocarbons in various markets and establishing suitable framework conditions for viable and sustainable markets in the years to come These objectives are achieved through a collection of papers contributed by experts actively engaged in various fields related to power to X

A Laboratory Manual of Analytical Methods of Protein Chemistry, Including Polypeptides Peter Alexander, Richard Joseph Block, Harold Palmer Lundgren, 1960 In the last fifteen years there has been a revolution in the techniques available for the analysis and isolation of proteins Every time a new technique has been introduced numerous papers have appeared describing modifications to it and the research worker who wishes to employ these methods is faced with a very serious problem in deciding which particular variant to use These volumes are intended to provide the fullest practical detail so that any scientist can follow the procedure by using this book alone and without having recourse to the original literature The techniques which are described in full are ones in which all the authors have had first hand experience and the descriptions contain those small but important points which save so much time In the first volume separation and isolation procedures are discussed the second concerns its analysis and reactivity and the third volume with the measurement of the macromolecular properties of proteins

A Laboratory Manual of Analytical Methods of Protein Chemistry P. Alexander, H. P. Lundgren, 2014-05-17 A Laboratory Manual of Analytical Methods of Protein Chemistry Volume 5 presents the laboratory techniques for protein and polypeptide study This book discusses the staining procedure for

histones which has a high degree of selectivity for basic proteins and the unique ability to visualize qualitative differences in terms of color changes Organized into four chapters this volume begins with an overview of the formalin mediated ammoniacal silver staining procedure as a selective stain for basic proteins and its application per cell and per extract This text then examines the optical rotatory dispersion ORD which has advanced into a powerful tool for describing the conformations and conformational changes of biopolymers Other chapters consider the application of ultrasensitive calorimetry to thermodynamic problems This book discusses as well the principle of the technique its instrumentation and experimental procedures The final chapter deals with the hydrodynamic densities and preferential hydration values for protein precipitates in concentrated salt solutions This book is a valuable resource for chemists and biochemists

**Progress in Artificial Intelligence** Manuel Filipe Santos, José Machado, Paulo Novais, Paulo Cortez, Pedro Miguel Moreira, 2024-11-15 The 3 volume set LNAI 14967 14968 and 14969 constitutes the proceedings of the 23rd EPIA Conference on Artificial Intelligence EPIA 2024 held in Viana do Castelo Portugal during September 3 6 2024 The 94 full papers presented in these proceedings were carefully reviewed and selected from 187 submissions The papers are organized in the following topical sections Volume I AI and Creativity AIC Ambient Intelligence and Affective Environments AmIA Artificial Intelligence and IoT in Agriculture AIoTA Artificial Intelligence and Law AIL and Artificial Intelligence for Industry and Societies AI4IS Volume II Artificial Intelligence in Medicine AIM Artificial Intelligence in Power and Energy Systems AIPES Artificial Intelligence in Transportation Systems AITS Ethics and Responsibility in AI ERAI and General AI GAI Volume III Generative AI Foundations and Applications GenAI Intelligent Robotics IROBOT Knowledge Discovery and Business Intelligence KDBI Natural Language Processing Text Mining and Applications TeMA and Data Centric AI Solutions and Emerging Technologies DCenAI The Publishers' Trade List Annual ,1981 *Plant Molecular Biology Manual* Stanton Gelvin, 2012-12-06 During the past ten years great advances have been made in the area of plant molecular biology Such formerly esoteric techniques as gene transfer and plant regeneration are now routinely performed making the dissection of regulatory elements of genes a common practice in many laboratories Along with this new technology has come an almost bewildering array of rapidly changing techniques often making it difficult for the novice to select and perform the technique most appropriate for answering a given biological question In 1986 some of us felt that many of these techniques had become routine enough to warrant the publication of a laboratory manual The manual is designed both for advanced college level laboratory courses and as a bench guide for use in the scientific laboratory Recognizing the rapidly changing nature of plant molecular biology technology the editors have designed a laboratory manual that is both easy to use in the laboratory and which will be updated as the techniques change and new technologies are devised Additional chapters that can replace or be added to this first edition will be published periodically The editors recognize that many of the techniques described in this manual depend upon specialized plant genetic material microbial strains or recombinant plasmids Those people desiring

such material should contact the relevant authors directly A list of the various contributors to this manual including their addresses is included

Alexander,R. J. Block,2014-05-12 Analytical Methods of Protein Chemistry Volume 3

Determination of the Size and Shape of Protein Molecules provides information pertinent to the analysis and isolation of protein This book deals with the measurement of the macromolecular properties of proteins Organized into seven chapters this volume begins with an overview of the theory and practice of the electron microscope to allow an understanding of the type of object that may be examined This text then describes the methods of making protein molecules conform to such an ideal which are the techniques of specimen preparation Other chapters consider the determinations of osmotic pressures of proteins This book discusses as well the experimental basis for the theory of the diffusion process in liquids The final chapter deals with the technical problem characteristics of light scattering This book is a valuable resource for electron microscopists protein chemists biologists physicist physico chemists scientists and research workers

***Optical Activity of Proteins and Other Macromolecules*** Bruno Jirgensons,2012-12-06 The application of circular dichroism CD to various problems involving conformation of proteins and other biopolymers is emphasized in this revised and enlarged second edition The usefulness of CD and ORD in helping to solve structural problems is demonstrated by many examples and the most essential data are tabulated The author is sincerely grateful to the editors of the series Molecular Biology Biochemistry and Biophysics especially to Professor GEORG F SPRINGER M D for their interest in this edition as well as to the many reviewers for their constructive criticism of the first edition of this book Our previously unpublished work reported in this second edition was supported in part by grants from the R A Welch Foundation grant G 051 and U S Public Health Service grant CA 01785 Houston September 1973 B JIRGENSONS Preface to the First Edition Great advances have been made in the application of physical methods in the study of the structure of proteins and other biological macromolecules Optical rotatory dispersion has been successful in solving structural problems and a vast amount of literature has accumulated on this subject Several review articles appeared between 1961 and 1965 but significant progress has been made since 1965 Important new studies especially on the Cotton effects in the far ultraviolet spectrum have rendered many previous publications obsolete so that a concise monograph should be useful at this time
