principles to understanding equilibria chemical transformations macromolecular properties and supramolecular machines Each chapter of the book begins with a simplified view of a topic and evolves to more rigorous description in order to provide the student and instructor flexibility to choose the level of rigor and detail that suits them best The textbook treats important new directions in physical chemistry research including chapters on macromolecules principles of interfaces and films for organizing matter and supramolecular machines as well as including discussions of modern nanoscience spectroscopy and reaction dynamics throughout the text

An Introduction to the Physical Chemistry of Food John N.

Coupland,2014-06-30 Familiar combinations of ingredients and processing make the structures that give food its properties For example in ice cream the emulsifiers and proteins stabilize partly crystalline milk fat as an emulsion freezing crystallization of some of the water gives the product its hardness and polysaccharide stabilizers keep it smooth Why different recipes work as they do is largely governed by the rules of physical chemistry This textbook introduces the physical chemistry essential to understanding the behavior of foods Starting with the simplest model of molecules attracting and repelling one another while being moved by the randomizing effect of heat the laws of thermodynamics are used to derive important properties of foods such as flavor binding and water activity Most foods contain multiple phases and the same molecular model is used to understand phase diagrams phase separation and the properties of surfaces The remaining chapters focus on the formation and properties of specific structures in foods crystals polymers dispersions and gels Only a basic understanding of food science is needed and no mathematics or chemistry beyond the introductory college courses is required At all stages examples from the primary literature are used to illustrate the text and to highlight the practical applications of physical chemistry in food science
