**Identity Management Design Guide with IBM Tivoli Identity Manager** Axel Buecker, Dr. Werner Filip, Jaime Cordoba Palacios, Andy Parker, IBM Redbooks, 2009-11-06 Identity management is the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business. It is the process that enables business initiatives by efficiently managing the user life cycle including identity resource provisioning for people users and by integrating it into the required business processes. Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions. This IBM Redbooks publication provides an approach for designing an identity management solution with IBM Tivoli Identity Manager Version 5.1. Starting from the high level organizational viewpoint, we show how to define user registration and maintenance processes using the self registration and self care interfaces as well as the delegated administration capabilities. Using the integrated workflow, we automate the submission approval processes for identity management requests and with the automated user provisioning, we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention. This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure. *Enterprise Security Architecture Using IBM Tivoli Security Solutions* Axel Buecker, Ana Veronica Carreno, Norman Field, Christopher Hockings, Daniel Kawer, Sujit Mohanty, Guilherme Monteiro, IBM Redbooks, 2007-08-07 This IBM Redbooks publication reviews the overall Tivoli Enterprise Security Architecture. It focuses on the integration of audit and compliance, access control, identity management, and federation throughout extensive e-business enterprise implementations. The available security product diversity in the marketplace challenges everyone in charge of designing single secure solutions or an overall enterprise security architecture. With Access Manager, Identity Manager, Federated Identity Manager, Security Compliance Manager, Security Operations Manager, Directory Server, and Directory Integrator, Tivoli offers a complete set of products designed to address these challenges. This book describes the major logical and physical components of each of the Tivoli products. It also depicts several e-business scenarios with different security challenges and requirements. By matching the desired Tivoli security product criteria, this publication describes the appropriate security implementations that meet the targeted requirements. This book is a valuable resource for security officers, administrators, and architects who want to understand and implement enterprise security following architectural guidelines.
