The One Planet Life A Blueprint For Low Impact Development:

The 'One Planet' Life David Thorpe, 2014-11-13 The One Planet Life demonstrates a path for everyone towards a way of life in which we don't act as if we had more than one planet Earth. The difference between this approach and others is that it uses ecological footprint analysis to help to determine how effective our efforts are. Much of the book is a manual with examples on how to live the good life and supply over 65% of your livelihood from your land with mostly positive impacts upon the environment. It examines the pioneering Welsh policy One Planet Development then considers efforts towards one planet living in urban areas. After a foreword by BioRegional One Planet Living co-founder Pooran Desai and an introduction by former Welsh environment minister Jane Davidson, the book contains an essay arguing that our attitude to planning land and development needs to change to enable truly sustainable development. Guidelines on finding land finance and creating a personal plan for one planet living. Detailed guides on sustainable building, supplying your own food, generating renewable energy, reducing carbon emissions from travel, land management, water supply and waste treatment. 20 exemplary examples at all scales from micro businesses to suburbs followed by Jane Davidson's Afterword. The book will interest anyone seeking to find out how a sustainable lifestyle can be achieved. It is also key reading for rural and built environment practitioners and policy makers keen to support low impact initiatives and for students studying aspects of planning, geography, governance, sustainability and renewable energy.

Sustainable Urbanization Mustafa Ergen, 2016-09-28 The rapid urbanization that began with industrialization has begun to cause many problems. New approaches are emerging today to minimize these problems and make urban areas more livable. These problems include

insufficient social facilities in urban areas for increasing populations due to migration and unbalanced use of green areas water and energy resources due to urbanization Careless consumption and the pollution of natural resources will cause people many more problems in the future than they do today in urban development Many professional disciplines have noticed this unbalanced development in urban areas Urban areas have larger populations than rural areas today Urban areas are developed neglectfully Sustainability is needed as a criterion for urban areas to develop in a more livable and healthy fashion Sustainable urban development approaches are seen in many fields ranging from land use to the use of natural resources in urban areas

Architectural Thinking in a Climate Emergency Sofie Pelsmakers, James Benedict Brown, 2025-10-29 What is the role of architecture and the architect in the Anthropocene It s an immutable fact human activity is driving the climate and biodiversity crises that now threaten all life The damage we inflict on the planet undermines basic human rights displaces millions and intensifies structural racism sexism and segregation with the greatest burden falling on the most vulnerable people and ecosystems Architects must act The design and construction of most buildings and urban environments today are rooted in an economic model that pursues infinite growth Our profession is embedded in a paradigm that favours individual gain over collective benefit We are rewarded for overlooking the interdependence between people and the natural world Architecture contributes directly to environmental degradation and social injustice Architects agree that the profession must change But we lack the tools and knowledge to undertake the transformations that are urgently needed This book aims to address that need through 15 chapters illustrating how we can act collectively to make a difference Architectural Thinking in a Climate Emergency brings together writers researchers educators students and practitioners working at the forefront of this transformation Contributors come from fourteen countries across Africa Asia Europe North and South America and Oceania Many are leading voices in their fields others are emerging thinkers introducing fresh perspectives from both academia and practice Above all they each affirm the architect s responsibility to help transition toward carbon neutral sustainable practices that advance social and environmental justice
