

Structures of the Nervous System

KEY IDEAS

As you read this section, keep these questions in mind:

- What is the function of the central nervous system?
- What are the two components of the peripheral nervous system?
- How is a spinal reflex generated?

READING TOOLBOX

Learn New Words. As you read this section, underline words you don't know. When you figure out what they mean, write the words and their definitions in your notebook.

READING CHECK

1. Identify Which two structures make up the central nervous system?

The two structures make up the central nervous system is brain and the spinal cord.

LOOKING CLOSER

2. Describe What is the function of the brainstem?

The function of the brainstem is _____ that it helps the body maintain homeostasis by controlling breathing and heart rate.

What Is the Central Nervous System?

Your **nervous system** consists of your brain, spinal cord, and nerves. These structures are made of nervous tissue, which contains specialized cells called neurons. A **neuron** is a cell that receives and transmits electrical signals.

There are two main parts of your nervous system: the central nervous system and the peripheral nervous system. The **central nervous system** includes the brain and the spinal cord. It receives, interprets, and responds to internal and external information. ☐

STRUCTURE OF THE BRAIN AND SPINAL CORD

Your **brain** is the organ that interprets information from the rest of your body. Your brain also sends out signals that control the rest of your body. The brain has several different parts.

The **brainstem** is located at the bottom of the brain. It helps the body maintain homeostasis. For example, it controls heart rate and breathing rate.

The **cerebrum** is the largest part of the brain. It interprets information from the rest of the body. It also controls most movements. The left side of the cerebrum controls the right side of the body. The right side of the cerebrum controls the left side of the body.

The **cerebellum** controls balance, posture, and coordination. For example, it interprets information from your body to help you maintain your balance while you walk.

The **spinal cord** is a thick column of neurons that runs through the spine. It connects the brain to most of the rest of the body.
