Parrotta, 2024-10-02 South Asia a region of outstanding

biological diversity is home to approximately 2.1 billion people whose rich cultural traditions include sophisticated knowledge of the properties and uses of thousands of native and introduced plant species. Plant-based drugs integral to the traditional medical systems of India and neighboring countries play a central role in health care throughout the region and beyond as regional and global demand for therapeutically valuable plants continues to grow. However, the ongoing transformation and degradation of forests and other natural ecosystems in this region due to rapid environmental and socioeconomic changes poses serious challenges for the conservation and sustainable utilization of its medicinal plant wealth. Efforts to conserve the region's rich biodiversity and associated traditional knowledge require up-to-date information on the status and trends of these resources and their importance for health care and livelihoods.

Healing Plants of South Asia: A Handbook of the Medicinal Flora of the Indian Subcontinent helps to address this need. The work's introduction provides overviews of South Asia's diverse systems of traditional medicine as well as the region's biogeography, ecosystem, and plant species diversity and associated conservation challenges. Subsequent chapters focus on nearly 2,000 species of plants most commonly used in traditional medicine within the region. In chapters devoted to ferns and lycophytes (including 59 species), conifers (20 species), and flowering plants (1,849 species), the information provided draws upon a wide variety of authoritative published sources as well as reliable online databases. Entries for each species include currently accepted scientific names and common synonyms, vernacular names in the major regional languages, a complete botanical description, information on the species' ecology and conservation status, traditional therapeutic uses in Ayurveda, Unani, Siddha, Tibetan medicine, and more localized folk medical systems, and key references. The majority of these species are also beautifully illustrated with photos and/or botanical drawings.

Healing Plants of South Asia: A Handbook of the Medicinal Flora of the Indian Subcontinent will be of value to students, scientists, and professionals in a number of fields including pharmacology, pharmaceuticals, food chemistry, and nutrition, natural products chemistry, ethnobotany, and ethnomedicine. It should also appeal to conservationists, community development practitioners, industry, and policy makers among a host of those involved in the world of medicinal plants and traditional medicine in South Asia.

Using studies on contemporary Maya farming techniques and important new archaeological research, the authors show that the ancient Maya were able to support sustainably a vast population by farming the forest, thus refuting the common notion that Maya civilization devolved due to overpopulation and famine.

The Genera of Orchidaceae in Hong Kong (45th Anniversary Commemorative Edition) Shiu-ying Hu, 2022-07-01

The Genera of Orchidaceae in Hong Kong is a handy reference for both amateurs and professional botanists in Asia who wish to enter the field of modern orchidology. Orchid appreciation is an art deeply rooted in Asian cultures. But in 1977, when this

book was first published orchidology as a science was new to people there The technical vocabulary was unfamiliar and the subject matter difficult to understand Therefore this volume was intended as a general easy to use reference book with illustrations of the basic structure of orchids and their habit and habitat clearly described in Chapter I The book may also be used as a self help guide for naturalists and gardeners in Hong Kong who wish to identify an orchid new to them In Chapter II keys descriptions and illustrations are given to allow the reader to look up and gain information about individual orchid species Chapter III provides an analysis of the composition and an interpretation of the phytogeographic significance of the Orchidaceae in Hong Kong Finally Chapter IV helps the reader to understand and remember the Latinized names of orchids by providing an explanation on the origin and meaning of the generic names This book is a facsimile reprint of the 1977 edition which was published at a time when no comprehensive account of the genera of the orchids of Hong Kong had ever been attempted Even after many decades this volume remains the essential reference on orchid species growing in Hong Kong This commemorative edition features a new foreword and a chronology of Professor Hu s major life events
