S. Bertuglia,G. P. Clarke,A. G. Wilson,2012-08-21 Modelling the City examines the changing role of urban models in respect to both the need to readdress measures of urban well being and the perceived need to bring model outputs more in tune with key planning problems The authors argue that whilst there has been substantial progress with a wide range of theoretical problems in urban modelling modellers have not paid enough attention to the usefulness of their model outputs in terms of indicators which offer new insights into the workings of the city or region Modelling the City offers a new geography of performance indicators for the public and private sector based on the principles of spatial interaction **Geographies of Sexualities** Dr Gavin Brown,Dr Jason Lim,Professor Kath Browne,2012-11-28 Recent years have seen a dramatic upsurge of interest in the connections between sexualities space and place Drawing established and founding figures of the field together with emerging authors this innovative volume offers a broad interdisciplinary and international overview of the geographies of sexualities Incorporating a discussion of queer geographies Geographies of Sexualities engages with cutting edge agendas and challenges the orthodoxies within geography regarding spatialities and sexualities It contains original and previously unpublished material that spans the often separated areas of theory practices and politics This innovative volume offers a trans disciplinary engagement with the spatialities of sexualities intersecting discussions of sexualities with issues such as development race gender and other forms of social difference **Marxism and the City** Ira Katznelson,1992-03-05 Defeated in the East and discredited in the West Marxism has broken down as an ideology and as a guide to governance But for all its flaws it remains an important tool for understanding and raising questions about key aspects of modern life In Marxism and the City Ira Katznelson critically assesses the scholarship on cities that has developed within Marxism in the past quarter century to show how some of the most important weaknesses in

Marxism as a social theory can be remedied by forcing it to engage seriously with cities and spatial concerns. He argues that such a Marxism still has a significant contribution to make to the discussion of such historical questions as the transition from feudalism to a world composed of capitalist economies and nation states and the acquiescence of the western working classes to capitalism. Professor Katznelson demonstrates how a Marxism that embraces complexity and is open to engagement with other social theoretical traditions can illuminate our understanding of cities and of the patterns of class and group formation that have characterized urban life in the West. Migration and Residential Mobility Martin T.

Cadwallader, 1992. Analyzes the phenomenon of human migration especially in the industrialized countries of the west. Explains and applies various kinds of models, most of them statistical and most derived from the general linear model. Organized around two axes: micro vs macro approaches and interregional vs intracity migration. Paper edition, unseen, 1895. Annotation copyright by Book News Inc, Portland, OR. Deciphering the City William A. Schwab, 2020-10-07. Well written and extremely topical. *Deciphering the City* efficiently deals with the large and small issues facing cities today. A focus on globalization's impact on the role of cities, an explicit mission to drive home the applied nature of urban studies to students. This innovative text offers an exciting introduction to the history, issues, problems, potential solutions, and challenges facing cities in the developed and the developing world for the twenty-first century. Globalization has changed the roles of cities in the global economy, and this text begins with an introduction to the phenomenon of globalization and how the changes it has brought about have affected the social, political, and economic institutions of societies. The second section of the text concentrates on the psychology of the city and the community building process, while the book's third section illustrates the structure of cities and their historical and emerging patterns. *Deciphering the City* makes studying the city a relevant and interesting subject, necessary in understanding the functioning of today's world. *An Introduction to Population*

Geographies Holly R. Barcus, Keith Halfacree, 2017-09-01. *An Introduction to Population Geographies* provides a foundation to the incredibly diverse, topical, and interesting field of twenty-first century population geography. It establishes the substantive concerns of the subdiscipline, acknowledges the sheer diversity of its approaches, key concepts, and theories, and engages with the resulting major areas of academic debate that stem from this richness. Written in an accessible style and assuming little prior knowledge of topics covered, yet drawing on a wide range of diverse academic literature, the book's particular originality comes from its extended definition of population geography that locates it firmly within the multiple geographies of the life course. Consequently, issues such as childhood and adulthood, family dynamics, ageing, everyday mobilities, morbidity, and differential ability assume a prominent place alongside the classic population geography triumvirate of births, migrations, and deaths. This broader framing of the field allows the book to address more holistically aspects of lives across space, often provided little attention in current textbooks. Particular note is given to how these lives are shaped through hybrid social, biological, and individual arenas of differential life course experience. By engaging with traditional quantitative perspectives

and newer qualitative insights the authors engage students from the quantitative macro scale of population to the micro individual scale Aimed at higher level undergraduate and graduate students this introductory text provides a well developed pedagogy including case studies that illustrate theory concepts and issues *A Companion to the Medieval World* Carol Lansing,Edward D. English,2012-10-11 Drawing on the expertise of 26 distinguished scholars this important volume covers the major issues in the study of medieval Europe highlighting the significant impact the time period had on cultural forms and institutions central to European identity Examines changing approaches to the study of medieval Europe its periodization and central themes Includes coverage of important questions such as identity and the self sexuality and gender emotionality and ethnicity as well as more traditional topics such as economic and demographic expansion kingship and the rise of the West Explores Europe s understanding of the wider world to place the study of the medieval society in a global context

City Phil Hubbard,2006-09-27 Locates the concept of the city within traditions of social thought providing a basis for understanding its varying usages and meanings Spelling out the importance of a geographical perspective on the city this book suggests that it is only by bringing different ways of mapping it together that we can begin to make sense of it

Bibliographie Internationale de Sociologie 1987 British Library of Political and Economic Science,1991 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge on the social sciences *Population Structures and Models* Robert Woods,Philip Rees,2023-10-02 Originally published in 1986 this volume brings together geographical modelling of population change and demographic analysis of population structures and pattern These 2 strands are interwoven in 3 key review chapters that summarize the study of spatial and temporal patterns of population the modelling of spatial populations and the estimation of population processes Findings reported include An account of demographic transition an expos of the myth of no fertility rises in the developing world in the 20th Century a theory of population accounting predicting migration flows for a system of regions microsimulation methods to model population change and demographic and economic processes integrated in an urban region model
