Natural Products for the Management of Arthritic Disorders Rupesh K. Gautam, Lokesh Deb, Kamal Dua, 2022-08-20

Rheumatoid arthritis RA is the most common inflammatory complication and affects approximately 1 % of the global population. It affects three times more women than men. RA is an autoimmune disorder elicited by exposure of genetic factors from the host to unknown antigens causing arthritogenic complaints. It also includes the activation of lymphocytes as well as CD4 helper T cells along with local release of chronic inflammatory mediators and cytokines like tumor necrosis factor (TNF) and various cytokines like interleukins (IL) that enormously affect the joints. The available allopathic therapies for RA are not a cure for the complications and antibody therapy and surgical procedures are expensive. However, in the present era, researchers and healthcare professionals have moved toward natural medicines obtained from plants and other natural sources. Research based on developments in phytomedicine has progressed steadily. Evidence has been collected to show the massive therapeutic potential of medicinal plants used in various traditional systems against many pathological complications. Researchers have focused on the therapeutic potential of natural products used for treatment and counteracting various disorders along with their complications having negligible adverse effects.

Natural Products for the Management of Arthritic Disorders compiles current knowledge about the bioactive compounds and herbal formulations useful in the treatment of rheumatoid arthritis. 11 chapters explain the role of natural products in the management of rheumatoid arthritis. Topics have been contributed by experts in medicinal chemistry and rheumatology. The book first introduces the reader to rheumatoid arthritis before delving into conventional and alternative therapies for the disease. The editors have also included special topics such as the biomarkers for RA, cytokines, and anti-inflammatory mediators, preclinical and clinical studies. The range of topics should provide a comprehensive overview of natural remedies for arthritis and the role of natural products in anti-arthritic drug development. The information will be useful for many readers including medical and pharmacology students, multidisciplinary research scholars, scientists, pharma, herbal food industrialists, and policy makers.

Evaluation of Environmental Contaminants and Natural Products: A Human Health Perspective Ashita Sharma, Manish Kumar, Satwinderjeet Kaur, Avinash Kaur Nagpal, 2019-06-10

Unbridled urbanization and development of natural land resources has led to the degradation of our surrounding environment. The air that we breathe, the water we drink, and the food we eat is at risk of being contaminated with a plethora of chemical pollutants, some of them being potentially carcinogenic. This presents a challenge to human health. This book attempts to address this challenge in two parts which represent two different approaches. The first part of the book summarizes the alarming effects of environmental contaminants. Various studies depicting the direct relationship of environmental contaminants with cancer incidence have been referenced. Scientific studies have established an inverse relation between cancer and ingestion of dietary phytoconstituents, phytochemicals in the form of fruits, vegetables, and botanical herbs. Plant products as dietary supplements can suppress

contaminant toxicity by regulating the resulting reactive species and also by assisting their bodily excretion through Phase 1 and Phase 2 enzyme metabolism The second part of the book shifts focus to phytoconstituents which if included in diet can prevent the harmful effects of pollutants The text references numerous studies showing the anti mutagenic anti genotoxic and anti carcinogenic potential of many plant products The combination of information about contemporary issues of carcinogenic contaminants in the environment coupled with the references to relevant studies in this handbook will enlighten readers studying courses in environmental chemistry toxicology botany and ecology about environmental toxins and help them understand specific dietary measures known to reduce the toxic impact Researchers in the field of nutrition can also benefit from the information provided
