Herrstrom, 2017-09-26 This book is an interdisciplinary synthesis and interpretation about the experience of light as revealed in a wide range of art and literature from Paleolithic to Roman times Humanistic in spirit and in its handling of facts it marshals a substantial body of scholarship to develop an explication of light as a central even dramatic reality of human existence and experience in diverse cultural settings David S Herrstrom underscores our intimacy with light not only its constant presence in our life but its insinuating character Focusing on our encounters with light and ways of making sense of these this book is concerned with the personal and cultural impact of light exploring our resistance to and acceptance of light Its approach is unique The book's true subject is the individual's relationship with light rather than the investigation of light's essential nature It tells the story of light seducing individuals down through the ages Consequently it is not concerned with the progress of scientific inquiries into the physical properties and behavior of light optical science but rather with subjective reactions to it as reflected in art Paleolithic through Roman architecture Egyptian Grecian Roman mythology and religion Paleolithic Egyptian and literature e.g. Akhenaten Plato Aeschylus Lucretius John the Evangelist Plotinus and Augustine This book celebrates the complexity of our relation to light's character No individual experience of light is truer than any other none improves on any previous experience of light's tidal pull on us And the wondrous variety of these encounters has yielded a richly layered tapestry of human experience By its broad scope and interdisciplinary approach this pioneering book is without precedent The Principles of Psychology William James, 1918 Polarised Light in Science and Nature J. Color in the Outdoors Marcel Minnaert, 1995-04-13 All of science springs from the observation of nature In this classic book the late Professor Minnaert accompanies the reader on a tour of nature's light and color and reveals the myriad phenomena that may be observed outdoors with no more than a pair of eyes and an enquiring mind From the intriguing shape of the dapples beneath a tree on a sunny day via rainbows mirages and haloes the colors of liquid ice and the sky to the appearance of the sun moon planets and stars Minnaert describes and explains them all in a clear language accessible to laymen This new English edition is supplemented by 80 plates over half of them in color taken by the acclaimed photographer Pekka Parviainen illustrating many of the phenomena ordinary and exotic discussed in the book *James Turrell* Craig E.
