Morrison, 2012-12-06 Throughout the last decade the field of clinical psychology has expanded dramatically Clinical psychologists are involved in the treatment and research of a wider range of problems and disorders than they have ever been before Evidence has been rapidly accumulating regarding the role of psychological variables and stress in the etiology and maintenance of a range of medical and psychiatric disorders New models of psychotherapy have been developed and refined and the specific efficacy of psychotherapeutic interventions for an increasing number of disorders or subtypes of disorders has been documented However concurrent with research that demonstrates the impact of psychosomatic factors in various disorders and the efficacy of psychological or psychosocial interventions dramatic progress has been made with regard to the investigation of biological factors that may mediate certain disorders That physical factors may underlie many instances of psychiatric illness has been repeatedly demonstrated Also the efficacy of somatic treatments for different disorders or for subtypes of disorders has been reported with increasing methodological rigor Handbook of Assessment in Childhood Psychopathology Cynthia L. Frame, Johnny L. Matson, 2013-11-21 One of the most important practical problems in child psychology and psychiatry is the differential diagnosis of emotional disorders Until recently the general mode of assessment had been to apply to children the characteristics of psychopathology that were evident in adults In addition there had been few assessment tools available for use with children aside from modified versions of adult instruments Understandably this approach was controversial and dissatisfaction with it led to the more recent knowledge that adult and child problems may be manifested quite differently The third edition of the Diagnostic and Statistical Manual of Mental Disorders takes these factors into account much more extensively than previous editions Furthermore a great deal of research on methodology in child assessment procedures has emerged recently Yet in spite of these advances practicing clinicians are still frequently at a loss in moving from the characteristics of the disturbed child before them to the final assignment of a psychiatric diagnosis The focus of this book is to outline the various methods of viewing and categorizing the wide range childhood psychopathology with special emphasis on the end product of making a differential diagnosis Our goal was to make this book unique in several ways First we attempted to cover a wider range of disorders than is typical in currently available handbooks *Weiner's Pain Management* Mark V. Interviewing Michel Hersen, Samuel M. Turner, 2013-03-09 Perhaps the most difficult milestone in a young clinician's career is the completion of the first interview For the typical trainee the endeavor is fraught with apprehension and with some degree of dread If the interview goes well there is considerable rejoicing if it goes badly much consternation results Irrespective of the amount of preparation that has taken place before the interview the neophyte will justifiably remain nervous about this endeavor Thus the first edition of *Diagnostic Interviewing* was devoted to providing a clear outline for the student in tackling a large variety of patients in the interview setting In consideration of the positive response to the first edition of *Diagnostic Interviewing* published in 1985 we and our editor at Plenum Press Eliot Werner decided that it was time to update the material However the basic premise that a book of this nature needs to encompass theoretical rationale clinical description and the pragmatics of how to once again has been followed And as in the case of the first edition this second edition does not represent the cat's being skinned in yet another way Quite to the contrary we still believe that our students truly need to read the material covered herein with considerable care and once again the book is dedicated to them We are particularly concerned that in the clinical education of our graduate students interviewing has been given short shrift
