Thomas Hockey, 2023-05-27 In 2017 over 200 million Americans witnessed the spectacular total eclipse of the Sun and the 2024 eclipse is expected to draw even larger crowds In anticipation of this upcoming event this book takes us back in history over 150 years telling the story of the nation's first ever eclipse chasers Our tale follows the chaotic journeys of scientists and amateur astronomers as they trekked across the western United States to view the rare phenomenon of a total solar eclipse The fascinating story centers on the expeditions of the 1869 total eclipse which took place during the turbulent age of the chimerical Planet Vulcan and Civil War Reconstruction The protagonists a motley crew featuring astronomical giants like Simon Newcomb and pioneering female astronomers like Maria Mitchell were met with unanticipated dangers mission threatening accidents and eccentric characters only the West could produce Theirs is a story of astronomical proportions Along the way we will make several stops across the booming US railroad network traveling from viewing sites as familiar as Des Moines Iowa to ones as distant and strange as newly acquired Alaska From equipment failures and botched preparations to quicksand and apocalyptic comets welcome to the wild western world of solar eclipses **Canada Starwatch** Mike

pinpoints of light in the night sky are the same distance from us Suppose none of our contemporaries could tell us whether the Sun orbits the Earth or vice versa or even how large the Earth is Suppose no one had guessed there are mathematical laws underlying the motions of the heavens How would how did anyone begin to discover these numbers and these relationships without leaving the Earth What made anyone even think it was possible to find out how far without going there In Measuring the Universe we join our ancestors and contemporary scientists as they tease this information out of a sky full of stars Some of the questions have turned out to be loaded and a great deal besides mathematics and astronomy has gone

into answering them Politics religion philosophy and personal ambition all have played roles in this drama There are poignant personal stories of people like Copernicus Kepler Newton Herschel and Hubble Today scientists are attempting to determine the distance to objects near the borders of the observable universe far beyond anything that can be seen with the naked eye in the night sky and to measure time back to its origin The numbers are too enormous to comprehend Nevertheless generations of curious people have figured them out one resourceful step at a time Progress has owed as much to raw ingenuity as to technology and frontier inventiveness is still not out of date
