

WHAT IS METAPHYSICS?

Metaphysics is a philosophical discipline concerned with exploring the basic principles that govern the nature of reality.

Metaphysics explores abstract concepts to gain a deeper understanding of the world and the universe, with the goal of uncovering truths that are not easily seen in everyday life.

Metaphysics is divided into three main sub-disciplines, including *General Metaphysics*, *Psychical Metaphysics*, and *Physical Metaphysics*.

The Metaphysics of Bohmian Mechanics Vera Matarese, 2023-05-08 The aim of this book is to provide a comprehensive guide to the metaphysics of Bohmian mechanics Bohmian mechanics is a quantum theory that describes the motion of particles following trajectories that are determined by the quantum wave function The key question that the theory has to face relates to the ontological interpretation of the quantum wave function The main debate has mostly centered around two opposing views wave function realism on the one hand and the nomological view on the other hand The supporters of the former believe that the wave function is a physical field living in a high dimensional space the supporters of the latter regard the wave function as just an entity that appears in the laws of nature and lacks physical status This monograph discusses both views open mindedly illuminating their tacit problems and providing new insight into how they can be overcome Moreover it discusses the structuralist view which is often neglected and which can be regarded as a reconciliation of the two main opposing camps

The Metaphysics of Contingency Ferenc Huoranszki, 2022-07-14 Philosophers approach the problem of possibility in two markedly different ways with reference to worlds whereby an event is possible if there is a world in which it occurs and with reference to modal properties whereby an event is a possible manifestation of a property of some substance or object Showing how the world account cannot properly explain the nature of possibilities within worlds Ferenc Huoranszki argues that the latter approach is more plausible He develops a theory of contingent possibilities grounded in a distinction between abilities and dispositions as real first order modal properties of objects with fundamentally distinct ontological roles By understanding abilities as first order modal properties and by linking such modal properties to counterfactual conditionals Huoranszki argues we can distinguish between variably generic or specific abilities and identify more or less abstract possibilities in a world In doing so he furthers our understanding of how we reason with possibilities in both ordinary and theoretical contexts Providing a novel account of dispositions abilities and their capacity to explain modality this book advances current debates in contemporary metaphysics

Protective Measurement and Quantum Reality Shan Gao, 2015-01-22 Protective measurements offer an intriguing method for measuring the wave function of a single quantum system With contributions from leading physicists and philosophers of physics including two of the original discoverers of this important method this book explores the concept of protective measurement investigating its broad applications and deep implications Addressing both physical and philosophical aspects it covers a diverse range of topics including experimental possibility of protective measurements connections with the PBR theorem and the implications of protective measurements for understanding the nature of quantum reality Including a clear and concise introduction to standard quantum mechanics conventional measurements and the fundamentals of protective measurements this is a valuable resource for graduate students and researchers interested in the conceptual foundations of quantum mechanics

suffers from an excess of convoluted introspection One result is that concepts multiply unchecked That some events have observable causes gets reified into a First Cause or in a more secular age to the thesis that every event is fatalistically determined Another drawback of convoluted introspection is that tiny but crucial assumptions slip in often unawares with the result that densely argued counter tomes are written in reply and no progress is made toward any kind of consensus At bottom subjectivity reigns I exaggerate Toward the other pole of the subjectivity objectivity continuum consensus among scientists is in fact always at a good healthy distance from compulsive unanimity New theories replace old and at any one time the evidence can usually be interpreted two ways Indeed it is possible to pile epicycle upon epicycle in the Ptolemaic system of the heavens and approximate the ellipses planets travel in the Copernican system What cinched the case for Copernicus was not simplicity after all alchemy is simpler than chemistry Nor was it experiment there were no moon shots back then Rather it was Newton's foundations He established a physics for the earth and the heavens alike Earthly physics we can verify and it does not jell with the Ptolemaic system

The Law of International Human Rights Protection Walter Kälin, Jörg Künzli, 2019-09-19 At a time when human rights are coming under increasing pressure in depth knowledge and understanding of their foundations conceptual underpinnings and current practice remain crucial The second edition of Walter Kälin and Jörg Künzli's authoritative book provides a concise but comprehensive legal analysis of international human rights protection at the global and regional levels It shows that human rights are real rights creating legal entitlements for those who are protected by them and imposing legal obligations on those bound by them Based in particular on a wide ranging analysis of international case law the book focuses on the sources and scope of application of human rights and a discussion of their substantive guarantees Further chapters describe the different mechanisms to monitor the implementation of human rights obligations ranging from the regional human rights courts in Africa the Americas and Europe and the UN treaty bodies to the international criminal tribunals the International Court of Justice and the UN Security Council The book is based on an

understanding of human rights as legal concepts that address basic human needs and vulnerabilities and highlights the indivisibility of civil and political rights on the one and economic social and cultural rights on the other hand It also highlights the convergence of international human rights and international humanitarian law and the interlinkages with international criminal law as well as general international law in particular the law of state responsibility Being and Technology John Loscerbo,2012-12-06 The present wntmg attempts a clarification of the questlon bearing on technology and of its Essence in the Philosophy of Martin Heidegger In view of this our initial task will consist in examining the origins of modern technology which Heidegger descrites in the primordial experience of Being as cpvO u together with the human manners of comportment to this the primordial manifestness of Being We will begin in Part One by attending primarily but not exclusively to the subjective dimen sion allowing thereby the manner of the historical progression of Being that is its transforming self showing to stand in the background This procedure seems to us not merely appropriate with respect to our purpose as a whole but moreover cor responds to the matter at issue for Being in its own progression is essentially self concealing which in turn brings to prominence the subjective in union with the varied modes of the Being of beings termed beingness In conformity with Heidegger s interpretation of Metaphysics there can be but little doubt that Being itself persists throughout in presence only as absence Thus we will trace out this manner of Being s presence in absence and the respective dominating human manners of relatedness to Being s beingness that is we must observe the transformation of original vo6v or I SYEIV TSXV1J into Platonic i6slV j6S Y **Indigenous Education and the Metaphysics of Presence** Carl Mika,2017-03-16 Indigenous Education and the Metaphysics of Presence A worlded philosophy explores a notion of education called worldedness that sits at the core of indigenous philosophy This is the idea that any one thing is constituted by all others and is therefore educational to the extent that it is formational A suggested opposite of this indigenous philosophy is the metaphysics of presence which describes the tendency in dominant Western philosophy to privilege presence over absence This book compares these competing philosophies and argues that even though the metaphysics of presence and the formational notion of education are at odds with each other they also constitute each other from an indigenous worlded philosophical viewpoint Drawing on both Maori and Western philosophies this book demonstrates how the metaphysics of presence is both related and opposed to the indigenous notion of worldedness Mika explains that presence seeks to fragment things in the world underpins how indigenous peoples can represent things and prevents indigenous students critics and scholars from reflecting on philosophical colonisation However the metaphysics of presence from an indigenous perspective is constituted by all other things in the world and Mika argues that the indigenous student and critic can re emphasise worldedness and destabilise presence through creative responses humour and speculative thinking This book concludes by positioning well being within education because education comprises acts of worldedness and presence This book will be of key interest to indigenous as well as non indigenous academics researchers and postgraduate students in the fields of philosophy of education indigenous

^AChemical Philosophy of Robert Boyle Marina Paola Banchetti-Robino,2020-07-01 The Chemical Philosophy of Robert Boyle examines the relationship between Robert Boyle s experimental work in chemistry and his commitment to mechanical philosophy *The Metaphysics of Death* John Martin Fischer,1993 This collection of seventeen essays deals with the metaphysical as opposed to the moral issues pertaining to death For example the authors investigate among other things the issue of what makes death a bad thing for an individual if indeed death is a bad thing This issue is more basic and abstract than such moral questions as the particular conditions under which euthanasia is justified if it is ever justified Though there are important connections between the more abstract questions addressed in this book and many contemporary moral issues such as euthanasia suicide and abortion the primary focus of this book is on metaphysical issues concerning the nature of death What is the nature of the harm or bad involved in death If it is not pain what is it and how can it be bad Who is the subject of the harm or bad if the person is no longer alive how can he be the subject of the bad An if he is not the subject who is Can one have harm with no subject When does the harm take place Can a harm take place after its subject ceases to exist If death harms a person can the harm take place before the death occurs If death can be a bad thing would immortality be a desirable alternative This family of questions helps to frame the puzzle of why and how death is bad Other subjects addressed include the Epicurean view that death is not a misfortune for the person who dies the nature of misfortune and benefit the meaningfulness and value of life and the distinction between the life of a person and the life of a living creature who is not a person There is an extensive bibliography that includes science fiction treatments of death and immortality
