The Nemesis Affair:

Nemesis Affair Revised And Expanded David Raup, 1999-11-23 In this lively fascinating and often disturbing book Raup reexplores the controversies of the Nemesis theory and investigates the issues both scientific and philosophical of mass extinction

The Nemesis Affair David M. Raup, 1987 A lively informal narrative by a renowned paleontologist introduces readers to the scientific research behind the theory that dinosaurs were killed off by the effects of a shower of comets

Illustrated When the Asteroid Hits Allen A. Debus, 2024-10-04 The incomprehensible notion of a very large chunk of ice or rock from outer space smashing into the Earth has only become mainstream within the past two centuries Though early writers imagined the utterly fantastic consequences of comet collisions and speculated on the devastation they might wreak it was not until the 1980s when scientists finally resolved that dinosaurs were extinguished by an asteroid 66 million years ago This startling announcement captivated the media and tilted the science fiction world but in reality history may have been punctuated repeatedly by such events This book collects and analyzes ideas of asteroid comet and planetary impacts with Earth spanning two centuries from the first realization of extinctions in fossil records to the new millennium reflected in scores of sci fi stories films and televised science documentaries The author examines social and geopolitical fears tied to the prospect of a cosmic borne catastrophe Science fiction and speculation are artfully melded

Perilous Planet Earth Trevor Palmer, 2003-06-12 A readable account of the history of natural disasters throughout history

Haec Mihi Fingebam David F. Bright, 1978 **The Last Extinction** Gerta Keller, 2025-09-09 The story behind Dr Gerta Keller s world shattering scientific discovery that dinosaur extinction was NOT caused by asteroid impact but rather by volcanic eruptions on the Indian peninsula a discovery that highlights today s existential threat of greenhouse gasses and climate change and one that sparked an all out war waged by the scientific establishment Part scientific detective story part personal odyssey The Last Extinction is the definitive account of a radical theory that has reshaped how we understand our planet s past and

as we face the possibility of a sixth extinction how we might survive its future For decades the dominant theory held that an asteroid impact caused the dinosaurs extinction But Princeton Geologist Dr Gerta Keller followed the evidence to the truth Deccan volcanism a series of massive volcanic eruptions in India triggered a long term climate catastrophe and Earth's fifth mass extinction Her findings upended the field and ignited a bitter feud in modern science what became known as the Dinosaur Wars Raised in poverty on a Swiss farm and told she could never be a scientist Keller defied expectations earning her PhD at Stanford and battling her way into the highest ranks of Geology eventually becoming a Professor of Paleontology and Geology at Princeton University Her refusal to back down in the face of ridicule sabotage and sexism makes her story as thrilling as her science which offers urgent insight into today's climate crisis Sustained planetary upheaval not a single cataclysmic event can plunge the planet into an age of death *The Eocene-Oligocene Transition* Donald R. Prothero, 1994 After a decade of new findings and interpretation based on innovative techniques during the 1980s archaeologists were pretty sure that 38 million years ago the earth still basked in a subtropical greenhouse that had lasted since the age of dinosaurs but 5 million years later there were glaciers in the Antarctic signalling the beginning of the icehouse state that we know now Here is a summary of the present understanding of the climatic and biological changes for nonspecialists who have some familiarity with the terms and concepts of archaeology Paper edition 08091 3 24 Annotation copyright by Book News Inc Portland OR **Affairs of West Africa** Edmund Dene Morel, 1902 *Drawing Out Leviathan* Keith M. Parsons, 2001-10-01 are dinosaurs social constructs Do we really know anything about dinosaurs Might not all of our beliefs about dinosaurs merely be figments of the paleontological imagination A few years ago such questions would have seemed preposterous even nonsensical Now they must have a serious answer At stake in the Science Wars that have raged in academe and in the media is nothing less than the standing of science in our culture One side argues that science is a social construct that it does not discover facts about the world but rather constructs artifacts disguised as objective truths This view threatens the authority of science and rejects science's claims to objectivity rationality and disinterested inquiry *Drawing Out Leviathan* examines this argument in the light of some major debates about dinosaurs the case of the wrong headed dinosaur the dinosaur heresies of the 1970s and the debate over the extinction of dinosaurs Keith Parsons claims that these debates though lively and sometimes rancorous show that evidence and logic not arbitrary rules of the game remained vitally important even when the debates were at their nastiest They show science to be a complex set of activities pervaded by social influences and not easily reducible to any stereotype Parsons acknowledges that there are lessons to be learned by scientists from their would be adversaries and the book concludes with some recommendations for ending the Science Wars *Comets, Popular Culture, and the Birth of Modern Cosmology* Sara Schechner Genuth, 2021-03-09 In a lively investigation into the boundaries between popular culture and early modern science Sara Schechner presents a case study that challenges the view that rationalism was at odds with popular belief in the development of scientific theories Schechner Genuth

delineates the evolution of people's understanding of comets showing that until the seventeenth century all members of society dreaded comets as heaven sent portents of plague flood civil disorder and other calamities Although these beliefs became spurned as vulgar superstitions by the elite before the end of the century she shows that they were nonetheless absorbed into the science of Newton and Halley contributing to their theories in subtle yet profound ways Schechner weaves together many strands of thought views of comets as signs and causes of social and physical changes vigilance toward monsters and prodigies as indicators of God's will Christian eschatology scientific interpretations of Scripture astrological prognostication and political propaganda and celestial mechanics and astrophysics This exploration of the interplay between high and low beliefs about nature leads to the conclusion that popular and long held views of comets as divine signs were not overturned by astronomical discoveries Indeed they became part of the foundation on which modern cosmology was built

Lifting the Scientific Veil Paul Sukys, 1999 *Lifting the Scientific Veil* has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences Since nonscientists are generally responsible for making laws financing research or at the very least for voting it is essential that they understand the significant impact that science has on everyday life The book is designed to introduce nonscientists in an informative and comprehensible manner to four of the most significant scientific theories of the twentieth century the big bang quantum physics relativity and evolution After each theory is explained informally the book shows how that theory and related technology impact upon one's personal life Legal and political aspects of these theories are explored as well as philosophical and theological implications **Vanished** Sadiya Qureshi, 2025-06-05 A vital and important book David Olusoga From an award winning historian of race science and empire a path breaking and poignant history of extinction as a scientific idea an imperial legacy and a political choice Anyone alive today is among a tiny fraction of the once living over 90% of species that ever existed are now extinct How did we come to think of ourselves as survivors in a world where species can vanish forever or as capable of pushing our planet to the verge of a sixth mass extinction Extinction Sadiya Qureshi shows us is a surprisingly modern concept and a phenomenon that's not as natural as we might think In Europe until the late eighteenth century species were considered perfect and unchanging creations of God Then in the age of revolutions scientists gathered enough fossil evidence to determine that mammoth bones for example were not just large elephants but a lost species that once roamed the Earth alongside ancient humans Extinction went from being regarded as theologically dangerous to pervasive and even inevitable Yet *Vanished* shows us that extinction is more than a scientific idea it's a political choice that has led to devastating consequences Europeans and Americans quickly used the notion that extinction was a natural process to justify persecution and genocide predicting that nations from Newfoundland's Beothuk to Aboriginal Australians were doomed to die out from imperial expansion Exploring the tangled and unnatural histories of extinction and empire *Vanished* weaves together pioneering original research and breath taking storytelling to

show us extinction is both an evolutionary process and a human act one which illuminates our past and may alter our future

The Diversity of Life Edward O. Wilson, 1992 View a collection of videos on Professor Wilson entitled On the Relation of Science and the Humanities In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon There in the perfect bowl of the night sky untouched by light from any human source a thunderstorm sends its premonitory signal and begins a slow journey to the observer who thinks the world is about to change Watching from the edge of the Brazilian rain forest witness to the sort of violence nature visits upon its creatures Edward O Wilson reflects on the crucible of evolution and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity Wilson internationally regarded as the dean of biodiversity studies conducts us on a tour through time traces the processes that create new species in bursts of adaptive radiation and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years The five enormous natural blows to the planet such as meteorite strikes and climatic changes required 10 to 100 million years of evolutionary repair The sixth great spasm of extinction on earth caused this time entirely by humans may be the one that breaks the crucible of life Wilson identifies this crisis in countless ecosystems around the globe coral reefs grasslands rain forests and other natural habitats Drawing on a variety of examples such as the decline of bird populations in the United States the extinction of many species of freshwater fish in Africa and Asia and the rapid disappearance of flora and fauna as the rain forests are cut down he poignantly describes the death throes of the living world s diversity projected to decline as much as 20 percent by the year 2020 All evidence marshaled here resonates through Wilson s tightly reasoned call for a spirit of stewardship over the world s biological wealth He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth Cutting through the tangle of environmental issues that often obscure the real concern Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over he convincingly drives home the point that both aims can and must be integrated Unparalleled in its range and depth Wilson s masterwork is essential reading for those who care about preserving the world biological variety and ensuring our planet s health

The Methodology of Economics Mark Blaug, 1992-07-31 This book is an examination of the nature of economic explanation The opening chapters introduce current thinking in the philosophy of science and review the literature on methodology Professor Blaug then turns to the troublesome question of the logical status of welfare economics giving the reader an understanding of the outstanding issues in the methodology of economics This is followed by a series of case studies of leading economic controversies which shows how controversies in economics may be illuminated by paying attention to questions of methodology A final chapter draws the strands together and gives the author s view of what is wrong with modern economics This book is a revised and updated edition of a classic work on the methodology of economics in which Professor Blaug develops his discussion of the latest developments in macroeconomics general equilibrium theory

and international trade theory A new section on the rationality postulate is also added *The Astrobiological Landscape* Cirkovic,2012-06-21 Introducing new multidisciplinary concepts this book explains how we have reached a critical threshold in the study of astrobiology Global Events and Event Stratigraphy in the Phanerozoic Otto H. Walliser,2012-12-06 The existence of rapid and even catastrophic turnovers within the Phanerozoic ecosystems has been discussed controversially for more than 170 years Since 1980 this discussion has become even more intensive after the hypothesis of Alvarez explaining the end Cretaceous mass extinction as the result of a huge asteroid impact on the Earth This theory stimulated several thousand papers and is still controversial The international research programme on Global Biological Events in Earth History attempts to bring the discussion back to the facts by using multidisciplinary investigations of the major Phanerozoic events The results of an international group of experts are presented giving a wealth of information and a thorough discussion of the causes of the various global events The Common But Less Frequent Loon and Other Essays Keith Stewart Thomson,1996-02-21 Looking at the aesthetic literary and intellectual aspects of science this work sets out to convey what is involved in being a scientist today Science is described as a great adventure a search for why things are as they are **The Late Devonian Mass Extinction** George R. McGhee,1996 Based on two decades of research The Late Devonian Mass Extinction reviews the many theories that have been presented to explain the global mass extinction that struck the earth over 367 million years ago considering in particular the possibility that the extinction was triggered by multiple impacts of extraterrestrial objects *The Paleobiological Revolution* David Sepkoski,Michael Ruse,2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology
