Globalizing Education Policy Fazal Rizvi, Bob Lingard, 2009-12-04 Rizvi and Lingard's account of the global politics of education is thoughtful complex and compelling It is the first really comprehensive discussion and analysis of global trends in education policy their effects structural and individual and resistance to them In the enormous body of writing on globalisation this book stands out and will become a basic text in education policy courses around the world Stephen J Ball Karl Mannheim Professor of Sociology of Education Institute of Education University of London UK In what ways have the processes of globalization reshaped the educational policy terrain How might we analyse education policies located within this new terrain which is at once local national regional and global In *Globalizing Education Policy* the authors explore the key global drivers of policy change in education and suggest that these do not operate in the same way in all nation states They examine the transformative effects of globalization on the discursive terrain within which educational policies are developed and enacted arguing that this terrain is increasingly informed by a range of neo liberal precepts which have fundamentally changed the ways in which we think about educational governance They also suggest that whilst in some countries these precepts are resisted to some extent they have nonetheless become hegemonic and provide an overview of some critical issues in educational policy to which this hegemonic view of globalization has given rise including devolution and decentralization new forms of governance the balance between public and private funding of education access and equity and the education of girls curriculum particularly with respect to the teaching of English language and technology pedagogies and high stakes testing and the global trade in education These issues are explored within the context of major shifts in global processes and ideological discourses currently being experienced and negotiated by all countries The book also provides an approach to education policy analysis in an age of globalization and will be of interest to those studying globalization and education policy across the social sciences

Answers in the Tool Box Clifford Adelman, 1999 *The Irregular School* Roger Slee, 2011-04-19 Should disabled students be in regular classrooms all of the time or some of the time Is the regular school or the special school or both the solution for educating students with a wide range of differences Inclusive education has been incorporated in government education policy around the world Key international organisations such as UNESCO and OECD declare their commitment to Education for All and the principles and practice of inclusive education There is no doubt that despite this respectability inclusive education is hotly contested and generates intense debate amongst teachers parents researchers and policy makers People continue to argue over the nature and extent of inclusion *The Irregular School* explores the foundations of the current controversies and argues that continuing to think in terms of the regular school or the special school obstructs progress towards inclusive education The book contends that we

need to build a better understanding of exclusion of the foundations of the division between special and regular education and of school reform as a precondition for more inclusive schooling in the future Schooling ought to be an apprenticeship in democracy and inclusion is a prerequisite of a democratic education The Irregular School builds on existing research and literature to argue for a comprehensive understanding of exclusion a more innovative and aggressive conception of inclusive education and a genuine commitment to school reform that steps aside from the troubled and troubling notions of regular schools and special schools It will be of interest to all those working and researching in the field of inclusive education

The Future of the Curriculum Ben Williamson, 2013-03-08 An examination of curriculum innovations that are shaped by new ideas about digital media and learning Although ideas about digital media and learning have become an important area for educational research little attention has been given to the practical and conceptual implications for the school curriculum In this book Ben Williamson examines a series of contemporary curriculum innovations in the United States Great Britain and Australia that reflect the social and technological changes of the digital age Arguing that the curriculum is always both forward and rearward looking Williamson considers how each of these innovations represents a certain way of understanding the past while also promoting a particular vision of the future The curriculum initiatives are all examples of what Williamson calls centrifugal schooling expressing a vision of education and learning that is decentered distributed and dispersed emphasizing networks and connections In centrifugal schooling a curriculum is actively assembled and improvised from a heterogeneous mix of people groups coalitions and institutional structures Participants in curriculum design and planning include local governments corporations foundations charities and nongovernmental organizations Among the curriculum innovations Williamson examines are High Tech High a charter school network in San Diego that integrates technical and academic education Opening Minds a competence based curriculum used in 200 British secondary schools and Quest to Learn a school for digital kids in New York City with a sister school in Chicago He also describes two major partnerships the Partnership for 21st Century Skills which advocates for 21st century readiness for American students and the Whole Education Alliance in Britain a network of third sector educational organizations

Philosophy for Children in Australia and how they informed the course that the philosophy in schools movement would take Part II focuses on the events and debates surrounding the development and production of new materials including arguments for and against the suitability of the original Philosophy for Children curriculum In Part III key developments relating to teaching philosophy in schools are analysed This collection of diverse views critical appraisals and different perspectives of historical currents is intended to stimulate thought provoking questions about theory and practice and to increase general awareness both nationally and internationally of the maturation of philosophy in schools in Australia It is also intended to encourage readers to identify emerging ideas and develop strategies for their implementation **Play and Literacy in**

Early Childhood Kathleen A. Roskos, 2017-07-05 This volume brings together studies research syntheses and critical commentaries that examine play literacy relationships from cognitive ecological and cultural perspectives The cognitive view focuses on mental processes that appear to link play and literacy activities the ecological stance examines opportunities to engage in literacy related play in specific environments and the social cultural position stresses the interface between the literacy and play cultures of home community and the school Examining play from these diverse perspectives provides a multidimensional view that deepens understanding and opens up new avenues for research and educational practice Each set of chapters is followed by a critical review by a distinguished play scholar These commentaries focus is to hold research on play and literacy up to scrutiny in terms of scientific significance methodology and utility for practice A Foreword by Margaret Meek situates these studies in the context of current trends in literacy learning and instruction Earlier studies on the role of play in early literacy acquisition provided considerable information about the types of reading and writing activities that children engage in during play and how this literacy play is affected by variables such as props peers and adults However they did not deal extensively as this book does with the functional significance of play in the literacy development of individual children This volume pushes the study of play and literacy into new areas It is indispensable reading for researchers and graduate students in the fields of early childhood education and early literacy development

English a Changing Medium for Education Constant Leung, Brian V. Street, 2012-07-25 In this volume a range of authors from different international contexts argue that the notion of communicative competence in English hitherto largely referenced to metropolitan native speaker norms has to be expanded to take account of diverse contexts of use for a variety of purposes It also discusses the popular belief that language and literacy should simply be regarded as a technical skill which confers universal benefits and that it should be replaced with a social practice view that recognises situated variations and diversity This volume we believe provides a reference point for extended research and practice in these areas that will be of interest to wide range of people engaged in language and literacy education Reauthorization of the Office of the Educational Research and Improvement Act United States. The Missing Links in Teacher Education Design G. Hoban, 2007-05-02 Rather than promote a single teacher

education design this book discusses new ways to think about the problem Key to such thinking is considering teacher education not independent elements but as a combination of links This book offers four key links conceptual ties across the university curriculum theory practice links between school and university settings social cultural links among the participants and personal links that shape the identity of teacher educators *Australia's Curriculum Dilemmas* Lyn Yates,Cherry Collins,Kate O'Connor,2011-03-15 Australia s Curriculum Dilemmas tells the story of Australia s recent attempts to come to grips with the big challenges of curriculum and sets up the background to understanding the debates that continue to surface as we move for the first time towards a national approach Detailing some of the inside stories and arguments of the last 30 years about what schools should do as well as some of the politics and lessons that have been learnt along the way it brings together accounts from a national research project and reflections from people who have been actively involved in developing curriculum policies for each state Expert contributors examine the challenges of the public management of curriculum drawing on the different experiences of curriculum reforms in different states They take up the problems of framing vocational and academic education for the new century and of confronting equity and diversity issues They show the fundamental differences that exist in Australia regarding the impact of examinations and assessment and the very different policy approaches that have been taken to tackle these issues Many people in this country are unaware of how much their experience of education has been formed by the particular values of the state in which they were educated For the first time this book demonstrates the effects of those differences now and into the future Competitiveness and the Quality of the American Work Force United States. Creating Curricula: Aims, Knowledge and Control Dominic Wyse, 2018-03-08 Knowledge has been a defining focus for the curriculum studies field In the early part of the 21st century convincing arguments were mounted that knowledge needed to be brought back in both to the curriculum of schools and to the attention of curriculum researchers This book is a result of these arguments and what some regarded as a crisis in curriculum study related to the growing emphasis on international comparisons between education systems The book's most important contribution is to build on seminal work in the sociology and philosophy of education in order to develop new foundations for curriculum study using the importance of transactions as the context for understanding knowledge in the curriculum The contributors build on this importance to suggest a rapprochement in the field around the idea of curriculum

knowledge as both constructed and real This book was originally published as a special issue of The Curriculum Journal
