

Lab Report Format

Date:

Name:

Title

A whole page for a title is unnecessary and quite wasteful of paper. Put the title of your lab experiment at the top. Include your name, your group members' names, teacher's name, course and the date.

Purpose

Answer in a sentence or two, "what is the purpose of this experiment?"

Question

Write down a testable question, e.g. "How does string length affect the period of a pendulum?" or "What is the acceleration due to gravity in my school?" The general format is "how does *independent variable* affect *dependent variable*?"

Hypothesis

Use the format "If...then...because". E.g. "If the length of the string increases, then the period of the pendulum will increase because the object has to travel farther".

Experimental Design

What are you going to do in the experiment? Explain briefly, in a few sentences, what is the generalized procedure. State the independent, dependent and controlled variables.

Materials

List any and all materials you will need for the experiment (NOT the materials you needed to build your launcher). Use the proper name and include the number if you need multiples.

Scientific Drawing

Include a one-page scientific drawing of your apparatus that includes your projectile launcher, measuring devices, etc.

Hodges, 2023-07-03 This book is written for all science or engineering faculty who have

ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

The Better Writing Breakthrough Eleanor Dougherty, Laura Billings, Terry Roberts, 2016-03-04 Every teacher knows the challenge of trying to engage reluctant readers and struggling writers students whose typical response to a writing prompt is a few sentence fragments scribbled on a sheet of paper followed by an elaborate shrug of the shoulders The best way to engage less confident readers and writers is to give them something powerful to think about The Discourse and Writing Cycle explores writing as a means to focus student thinking fuel deeper learning and build complex understanding in English social studies math and science This field tested approach from well respected experts Eleanor Dougherty Laura Billings and Terry Roberts is designed for use in grades 4-12 The book explores the three interrelated sequences of the cycle the Discourse Sequence the Transition to Writing Sequence and the

Writing Sequence and includes classroom examples and sample lesson plans from across the content areas The cycle will inspire you as a teacher and help you to inspire your students to write with confidence and competence How often we dim or extinguish the creative sparks that can come from good writing William Butler Yeats proclaimed that Education is not the filling of a pail but the lighting of a fire This book lights the fire for the teaching of writing John Hattie author of the Visible Learning books **How to Write to Learn Science** Bob Tierney, John Dorroh, 2004 Make science an exhilarating process of discovery Through a wealth of creative write to learn strategies this book offers inspiring techniques to coax out the reluctant scientists in your classroom This book is full of classroom tested pragmatic approaches from high school science teachers who used the ideas to make teaching and learning more creative endeavors
